Hansen et al. 2012

**A heat wave is generally defined as a period of several days to weeks of abnormally hot weather.**

- In the past 3-4 decades, there has been an increasing trend in high-humidity heat waves, which are characterized by the persistence of extremely high night-time temperature.<sup>1</sup>
- **The combination of high humidity and high night-time temperature can make for a deadly pairing, offering no relief and posing a particular threat for the elderly.**
- **Extreme heat events are responsible for more deaths annually than hurricanes, lightning, tornadoes, floods, and earthquakes combined.<sup>2</sup>**

# Heat and Humidity = Heat Index

# Heat Action Plan for Ahmedabad city: journey and lessons

# **First scientific workshop in March 2011 followed by MOU signed with IIPHG, AMC, NRDC USA under Vibrant Gujarat**

Maximum Temperature(Annual Average).

Latitude: 23.25 & Longitude: 72.75

In Ahmedabad, an annual average of maximum temperatures have been increasing steadily over the past 30 years

Graph data:

# Analysis of temperature and mortality data of Ahmedabad.

2010 Heat wave in Ahmedabad – Temp. reached 47deg C on 21<sup>st</sup> May

# 2010 Heat wave – daily mortality compared to 2009 and 2011 – 310 vs 100 deaths per day

---

# 2010 Australian Heat wave .

May 20-27<sup>th</sup> – excess deaths 800 in one week and 1344 excess deaths in May 2010.

# Ambulance calls for Unconsciousness case -EMRI 108

# Scientific Work & advocacy

- **Establishing Temperature – Mortality Relationship**
- Scientifically determining the thresholds with color codes to issue warnings at various levels
- Assessing various vulnerable groups
- Communicating the findings to various policy groups, Governments, Scientific Community and other interested NGO's.

# Temperature Mortality scatter plot and fitted Curve – Thresholds 41, 43, 45 deg C

Temperature Mortality Curve - Ahmedabad Colour Code

# Slum Community Heat Vulnerability Survey

- *Method* - 300 slum community households surveyed (primarily female heads of household); providing information for a total of 1,650 individuals
- *Key Findings* – **Slum communities are vulnerable and unaware of temperature and extreme heat dangerous**
- Those who have not sought Info on heat are *11 times more likely* to have heat illness.
- *Key Recommendations* – Educate, Warn & treat early

# Heat related admissions and mortality among **new-borns** in Ahmedabad in 2010

— Dr. Khyati Kakkad prof paediatrics, Ahmedabad and Dr. Perry Sheffield USA

---

During April, May, and June 2010,  
24 NICU admissions with high temp.  
without infection in newborns in SCL  
hospital: versus 8 and 4 admissions in  
2009 and 2011, respectively

**Increased NICU admissions in hospital ward:** Possible cause - slum house have tin roof and poor ventilation etc. so gets very hot

**Some deaths happened in NICU:**

Because NICU became very hot as it was on top floor and under black tar covered roof.

**As a solution, NICU was moved to the ground floor and the roof was replaced with a cool roof (china mosaic).**

# Pilot AHMEDABAD HEAT ACTION PLAN in 2013

# Key steps in developing HAP

- City government engagement
- Background data & analysis – weather and mortality / health
- Understanding city and vulnerable groups
- Early warning system and setting thresholds
- Feasible interventions and its detailing – IEC
- Writing the plan and disseminating
- Implementing and monitoring the impact
- Revising the plan and scaling it up

**Fighting Climate Effects:**  
Protecting People from Extreme Heat in  
One of India's Fastest-Growing Cities

# Focus Groups, Interviews, Pamphlets

- March 2012 Workshop, *Health Effects of Heat in Relation to Climate Change*
  - ▣ 2 focus groups held for health care professionals
  - ▣ Dozens of semi-structured interviews with govt.

Dr. Perry Sheffield, Mt. Sinai School of Medicine, with focus group of Ahmedabad medical professionals (Mar 2012).

Informational pamphlets and hoardings in English (left) and Gujarati (right),

# Community Outreach

**Fighting Climate Effects:**  
Protecting People from Extreme Heat in  
One of India's Fastest-Growing Cities

**HOW TO SAVE YOURSELF FROM HEAT WAVES**

NRDC (National Resource Development Centre) logo and other logos.

- Drink water, chaas, and other liquids (no soft drinks)
- Stay out of the sun
- Find a place to cool down
- Wear light clothing
- Check in with friends & family

**DRINK MORE WATER**

In case of an emergency, CALL 108

**હીટ એલર્ટ**  
**ગરમીથી તમે કેવી રીતે બચશો**

- પાણી, ચાસ અને અન્ય પ્રવાહી પીવો (હાર્ડ ડ્રીન્ક્સ નહીં)
- સૂર્યમાં ન રહો
- ઠંડાવા સ્થળો શોધો
- હીટ વેવમાં મેડી સ્થિતિ ઓળખો
- મિત્રો અને કુટુંબીજનોની સંભાળ રાખો

**ધ્યાન આપવા લાયક લક્ષણો:**

- ત્વરિતી બનાવિયું કે તણ
- જુર પડેલું થવું અને બચાવે બચવું
- આંધાંયો, ડુબાઈ થવું અને વમન/ઝાડવું

**HEAT ALERT**

**DOS & DON'TS DURING HEAT WAVES**

- Drink water, chaas, and other liquids (no soft drinks)
- Stay out of the sun
- Find a place to cool down
- Wear light clothing
- Check in with friends & family

**Symptoms to watch for:**

- Heat rash or cramps
- Heavy sweating and weakness
- Headache and nausea
- Lack of sweating despite the heat
- Red, hot, and dry skin
- Muscle weakness or cramps
- Nausea and vomiting

**DRINK MORE WATER**

People at high risk: children, elders, and pregnant women

In case of an emergency, CALL 108

NRDC (National Resource Development Centre) logo and other logos.

## *Building Capacity of medical community*

### Case Definitions

#### Heat Illness - Typical Presentations

Clinical Entity	Age Range	Setting	Cardinal Symptoms	Cardinal Signs	Pertinent Negatives	Prognosis
Heat rash	All, but frequently children	Hot environment; +/- insulating clothing or swaddling	Itchy rash with small red bumps at pores in setting of heat exposure; bumps can sometimes be filled with clear or white fluid	Diffuse maculopapular rash, occasionally pustular, at hair follicles; pruritic	Not focally distributed like a contact dermatitis; not confluent patchy; not petechial	Full recovery with elimination of exposure and supportive care
Heat cramps	All	Hot environment, typically with exertion, +/- insulating clothing	Painful spasms of large and frequently used muscle groups	Uncomfortable appearance, may have difficulty fully extending affected limbs/joints	No contaminated wounds/tetanus exposure; no seizure activity	Full recovery with elimination of exposure and supportive care
Heat exhaustion	All	Hot environment; +/- exertion; +/- insulating clothing or swaddling	Feeling overheated, lightheaded, exhausted and weak, unsteady, nauseated, sweaty and thirsty, inability to continue activities	Sweaty/diaphoretic; flushed skin; hot skin; normal core temperature; +/- dazed, +/- generalized weakness, slight disorientation	No coincidental signs and symptoms of infection; no focal weakness; no aphasia/dysarthria; no overdose history	Full recovery with elimination of exposure and supportive care; progression if continued exposure
Heat syncope	Typically adults	Hot environment; +/- exertion; +/- insulating clothing or swaddling	Feeling hot and weak; lightheadedness followed by brief loss of consciousness	Brief, generalized loss of consciousness in hot setting, short period of disorientation if any	No seizure activity, no loss of bowel or bladder continence, no focal weakness, no aphasia/dysarthria	Full recovery with elimination of exposure and supportive care; progression if continued exposure
Heat stroke	All	Hot environment; +/- exertion; +/- insulating clothing or swaddling	Severe overheating; profound weakness; disorientation, obtundation, seizures, or other altered mental status	Flushed, dry skin (not always), core temp $\geq 40^{\circ}\text{C}$ ; altered mental status with disorientation, possibly delirium, coma, seizures; tachycardia; +/- hypotension	No coincidental signs and symptoms of infection; no focal weakness; no aphasia/dysarthria; no overdose history	25-50% mortality even with aggressive care; significant morbidity if survive

Heat Wave

[Information](#)
[Do's and Don'ts](#)
[Recover and Build](#)
[Emergency Kit](#)

#### Information

A Heat Wave is a period of abnormally high temperatures, more than the normal maximum temperature that occurs during the summer season in the North-Western parts of India. Heat Waves typically occur between March and June, and in some rare cases even extend till July. The extreme temperatures and resultant atmospheric conditions adversely affect people living in these regions as they cause physiological stress, sometimes resulting in death.

The Indian Meteorological Department (IMD) has given the following criteria for Heat Waves :

- Heat Wave need not be considered till maximum temperature of a station reaches atleast 40°C for Plains and atleast 30°C for Hilly regions
- When normal maximum temperature of a station is less than or equal to 40°C Heat Wave Departure from normal is 5°C to 6°C Severe Heat Wave Departure from normal is 7°C or more
- When normal maximum temperature of a station is more than 40°C Heat Wave Departure from normal is 4°C to 5°C Severe Heat Wave Departure from normal is 6°C or more

### 'UP, Bihar must follow Gujarat'

By editor  
Created 11 Jun 2014 - 00:00  
Vardhan slams states' action in battle against encephalitis

Bihar CM Nitish Kumar and Uttar Pradesh ruling party chief Mulayam Singh Yadav may not be publicly subscribing to Prime Minister Modi's style of functioning, the Centre has suggested the two states to subscribe the Gujarat model in dealing with menacing encephalitis, that has resulted in 500-600 deaths this year so far.

In a meeting held today Dr Harsh Vardhan asked both UP and Bihar officials to replicate the "early warning system" installed in Ahmedabad. The minister asked the officials to approach the Natural Resources Defence Council and the Indian Institute of Public Health to replicate the existing system of Ahmedabad. "The government of Gujarat gets support from local health and environment groups to prepare local communities to the onset of extreme heat so that they can take all the necessary steps to protect themselves. My ministry will be happy to extend all possible assistance to put in place a preparedness plan," he said during a high-level meeting held Tuesday, following recent deaths of over 40 children in Bihar due to encephalitis.

Harsh Vardhan at a meeting to review encephalitis cases in Uttar Pradesh and Bihar

# Expanding HAP across India with help from NDMA – state DMA

- States with HAP
  - Haryana
  - Odhisa,
  - Telangana,
  - Andhra Pradesh,
  - Uttar Pradesh
  - Bihar
  - Karnataka
- HAP as a part of State Disaster Management Plan
  - Gujarat
  - Rajasthan

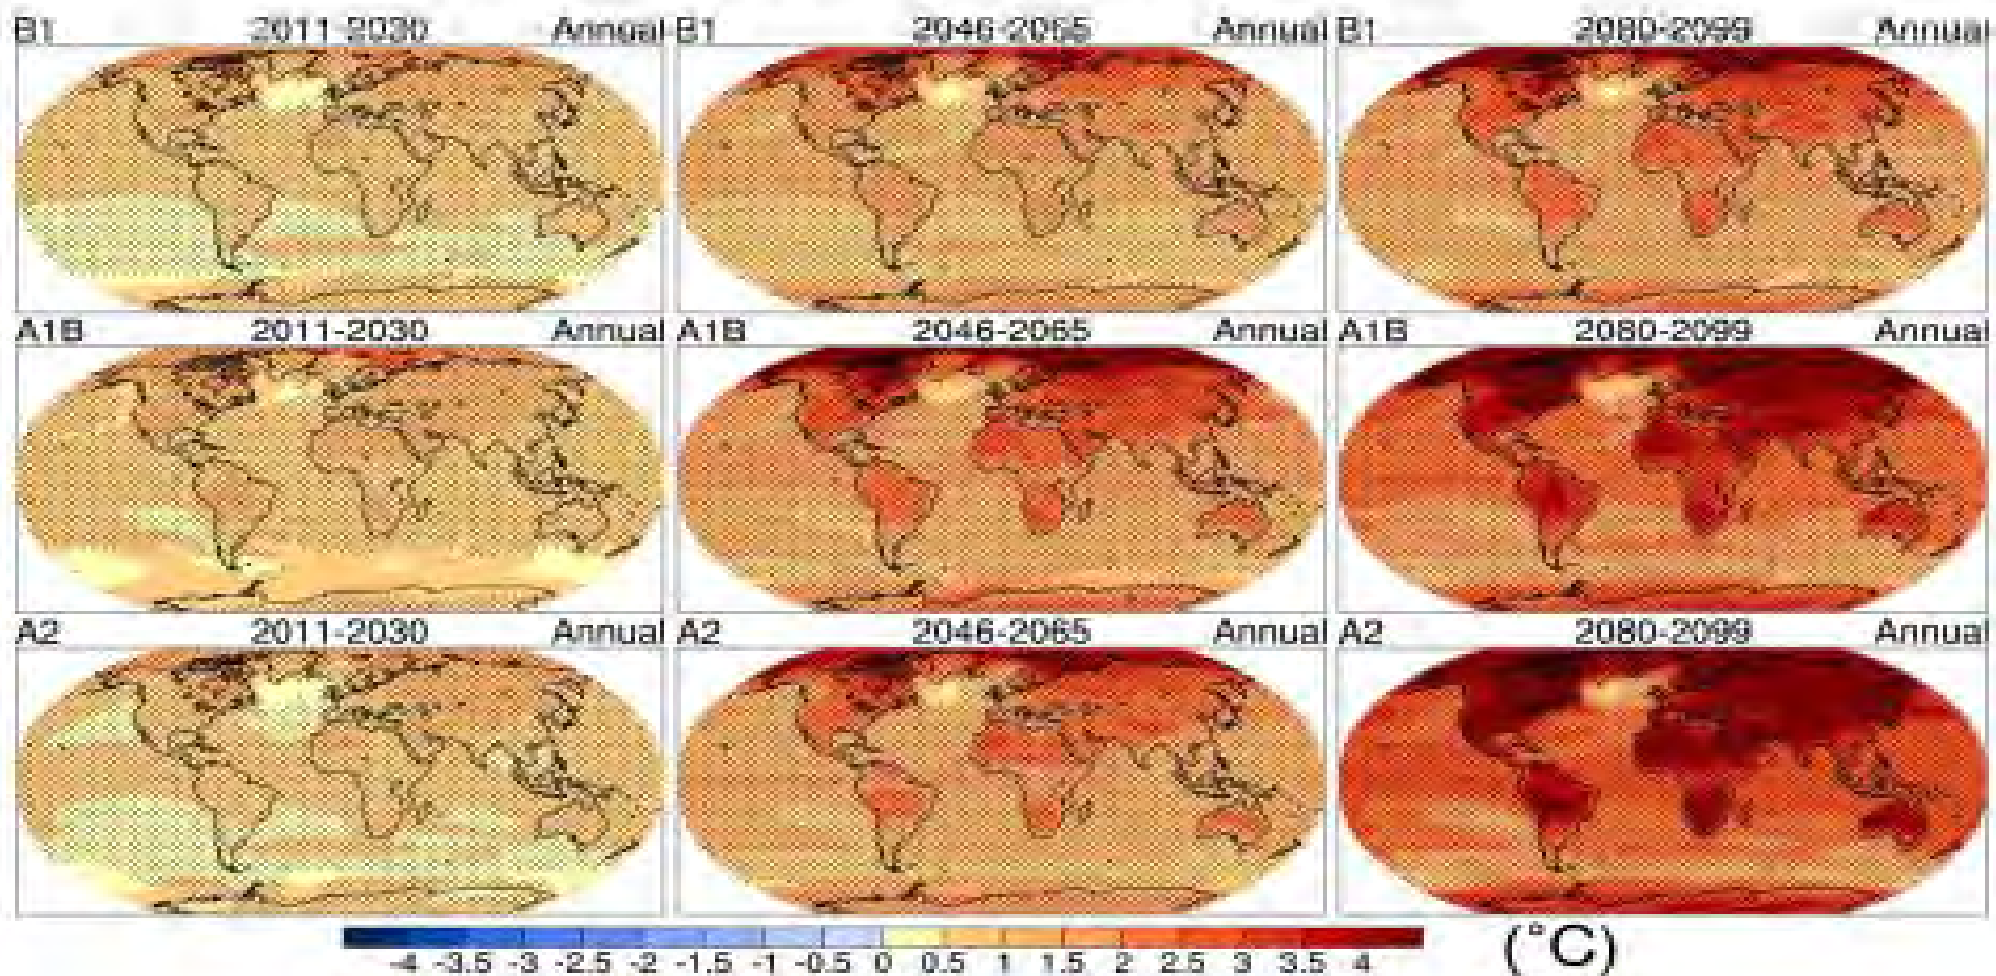

# Key lessons on development of HAP at local level

- Involvement of Local city or district administrative and health and political leadership
- Use of Local IMD and **Health data -death** registration, OPD, Indoor admission, ambulance calls... data
- Facilitation by local and national institutions / experts
- Learning and adapted HAP developed in other countries / cities
- Measurement of process of implementation and **Impact on mortality and morbidity**

**This is the beginning of climate change –  
worse still to come – so lets prepare now for  
next 80 years**

IPCC multi-model mean surface air temperature

# Thank You from all the partners
