

**Community Based  
Floods Early- Warning  
Communications And Dissemination  
A Case-Study from Nepal**

**By- Dr. Suman Kumar Karna  
DRRM Specialist – 16 Oct. 2019**

# Flood in Nepal

- Flood is an annual phenomenon.
- Average annual rainfall of Nepal is 1500 to 2500 mm
- 80% of the rainfall occurs between June to September.
- Average human deaths per year due to flood is more than 80.
- Economic loss is equivalent to 1.5 million USD

# **Flood Management Approach**

- **River Basin Approach**

Upstream Monitoring

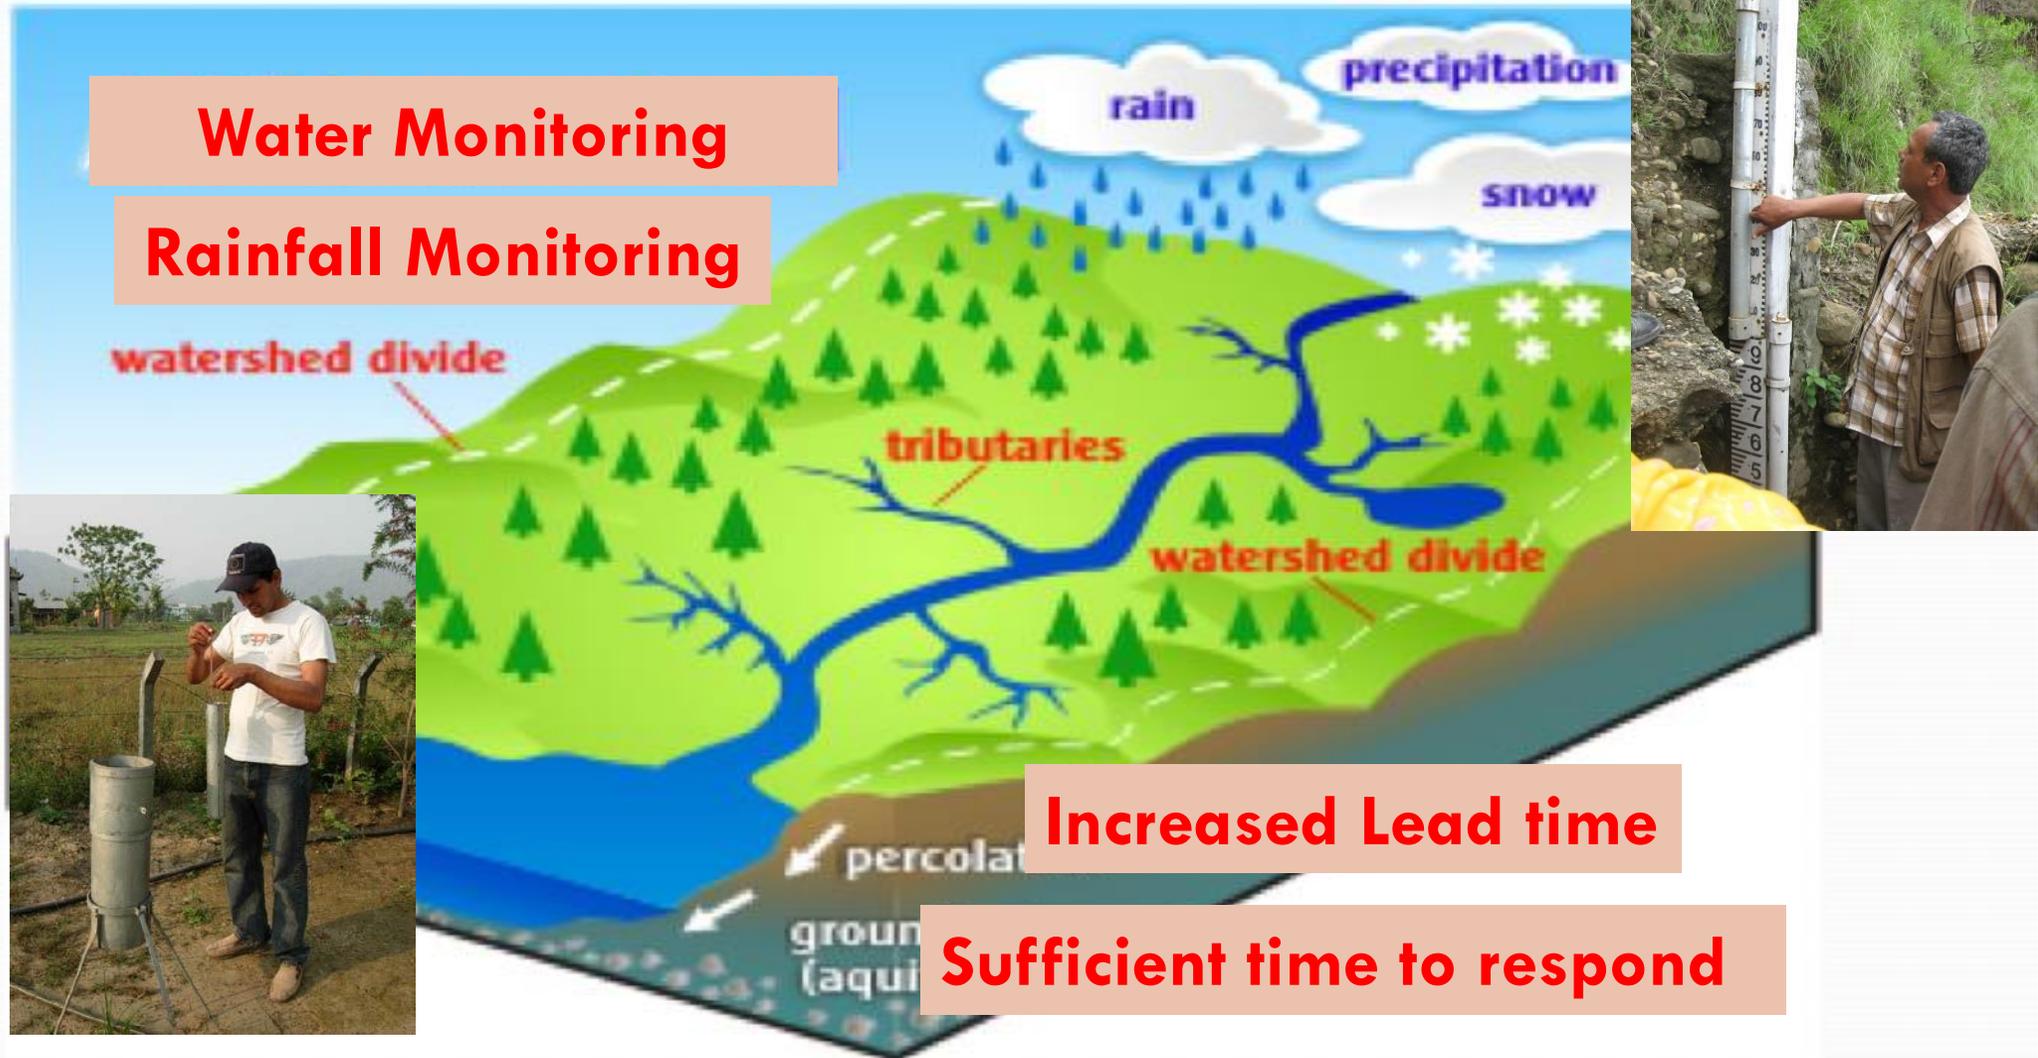

- **Real Time Telemetric**

Taking Advantage of Mobile Technology

# River Basin Approach

Water Monitoring

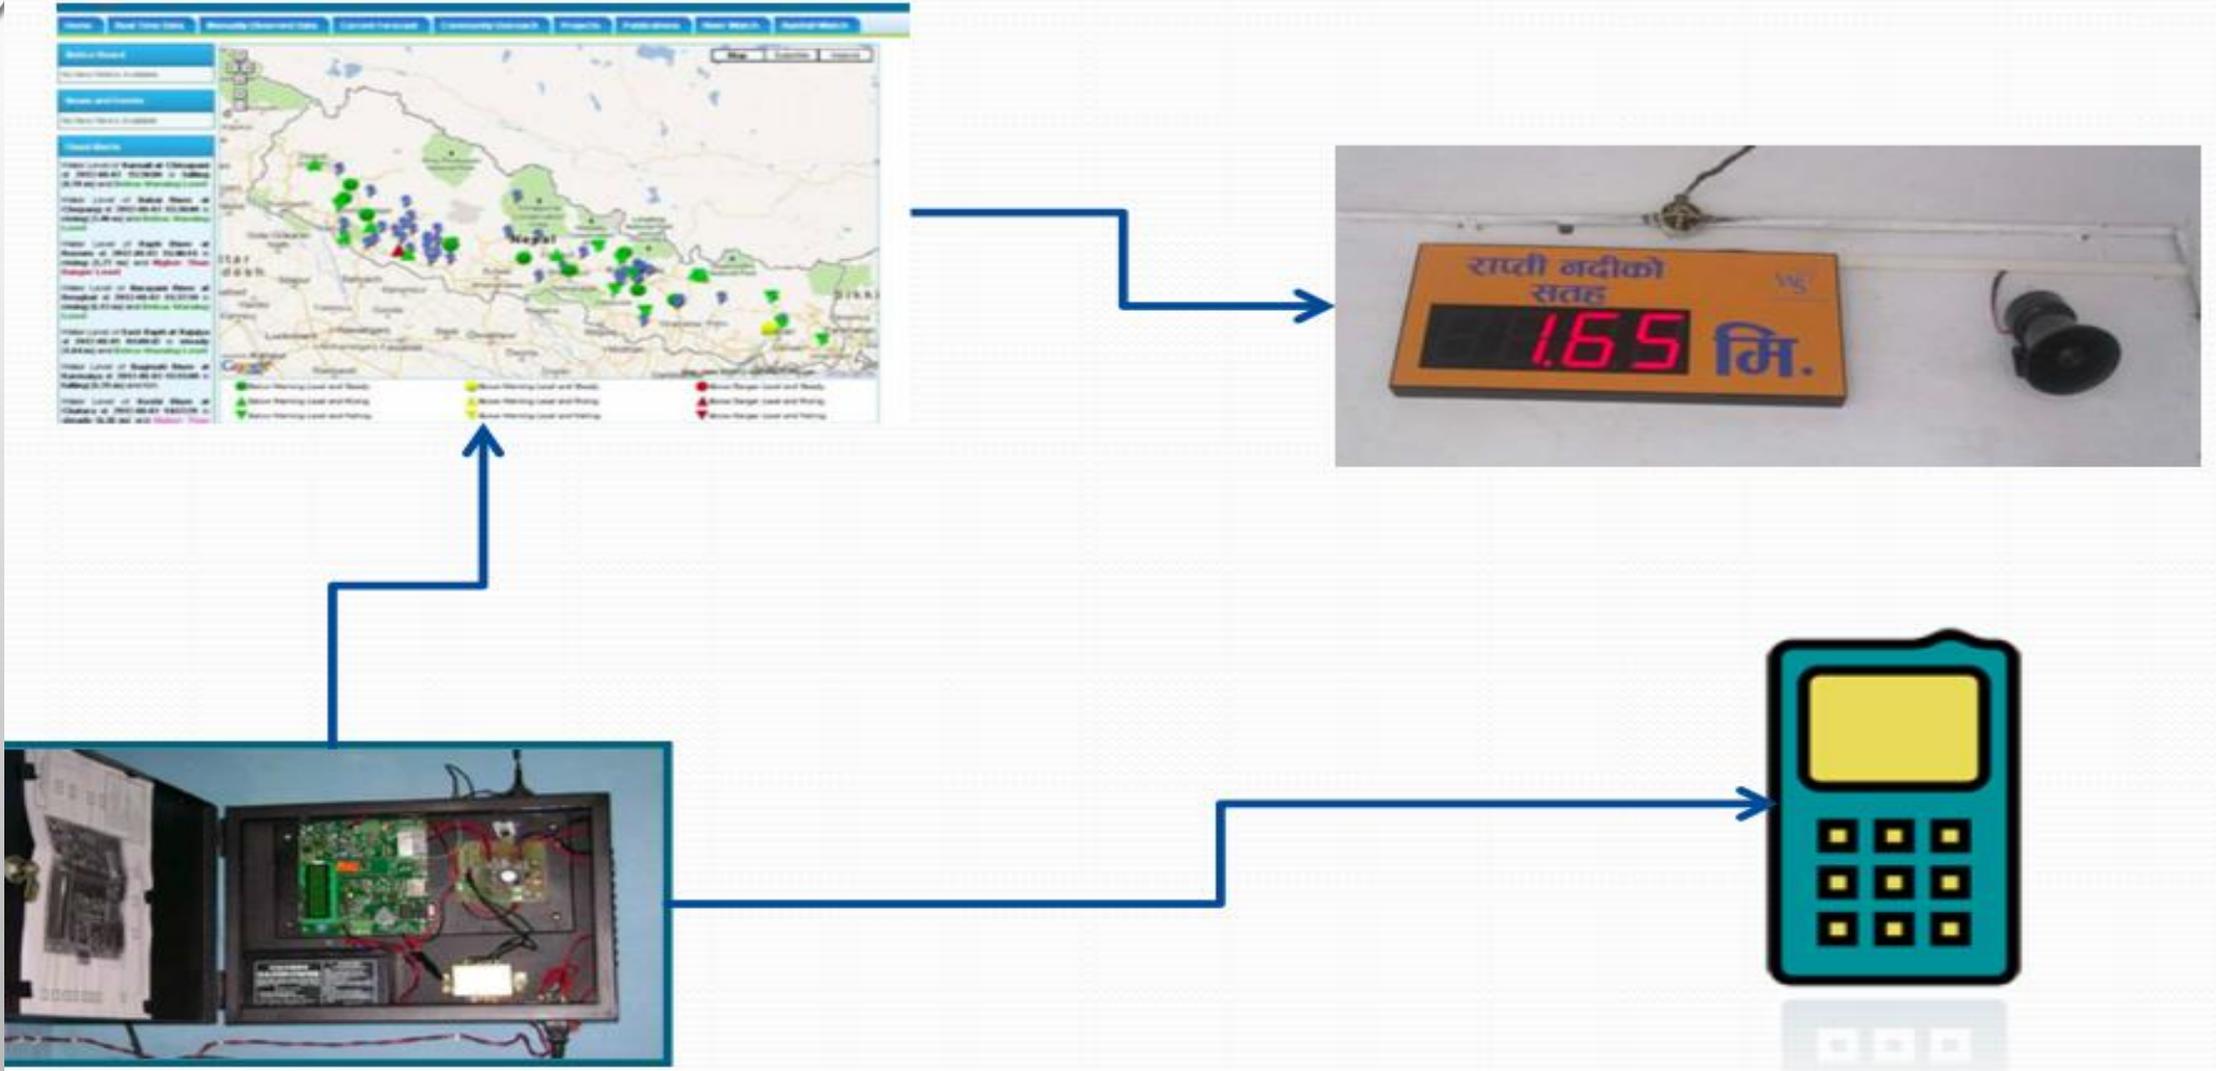

Rainfall Monitoring

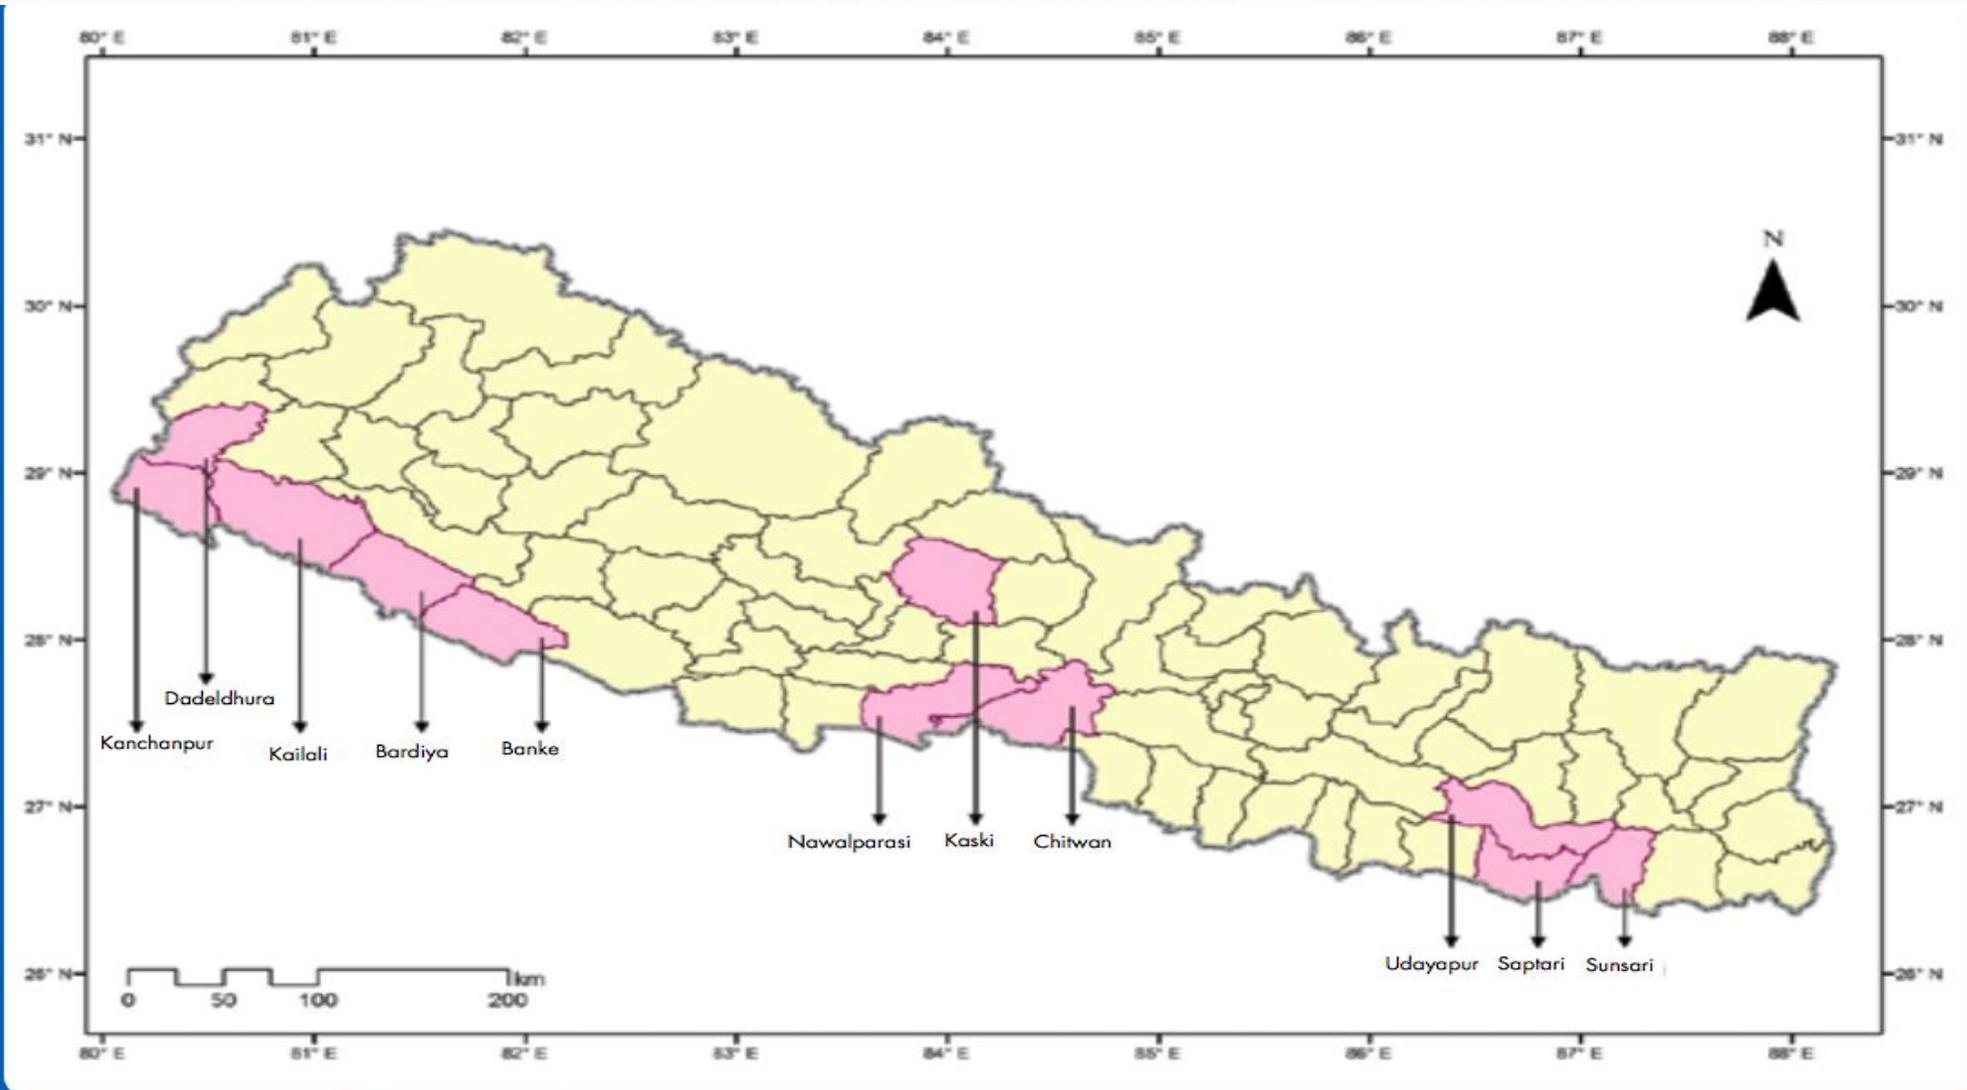

Increased Lead time

Sufficient time to respond

# Real Time Telemetry (only started after 2000)

# District With Community Based EWS

Source: ICIMOD, data from Practical Action

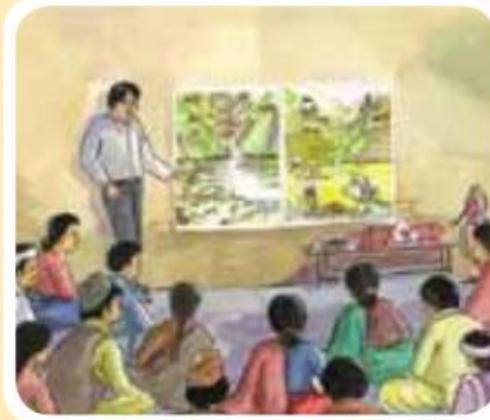

# Implementation Framework

- **Ministry of Home Affairs (MOHA)**  
Response and Coordination, Rapid Assessment  
Communication and Dissemination of Information
- **Ministry of Federal Affairs and General Administration (MOFAGA)**  
Preparedness, Capacity Building and Knowledge Management  
Community Support to Response and Assessment
- **Department of Hydrology and Metrology (DHM)**  
Monitoring and Observation of Meteorological Information  
Communication and Dissemination
- **Media And Private Sector**  
Communication and Dissemination

# Roles And Functions of Different Organizations in Disaster Risk Management in Nepal

Policy	Coordination	Technical support	Research	Implementation
	Department of Hydrology and Meteorology			
	Department of Soil Conservation and Watershed Management			
	Department of Water-Induced Disaster Preparedness			
	Ministry of Defence			
	Ministry of Education			
	Ministry of Federal Affairs and Local Development			MOFALD
	Ministry of Health and Population			
	Ministry of Home Affairs			MOHA
	Ministry of Irrigation			
	Ministry of Information and Communication	Ministry of Tourism and Civil Aviation		
	Ministry of Women and Children			
	National Planning Commission			
	Mercy Corps			
	Oxfam			
	Plan International (Nepal)			
	Practical Action (Nepal)			
	Save the Children			
	Nepal Red Cross Society			
	UNDP-CDRMP			UNDP-CDRMP
	Agro-Farm Foresters' Association, Nepal			
	Centre for Disaster Management Studies			Centre of Resilient Development
	DPNet			DPNet
	National Disaster Risk Management Forum			
	Society of Hydrologists, Nepal			

# FOUR KEY ELEMENTS OF 'PEOPLE CENTERED' EWS

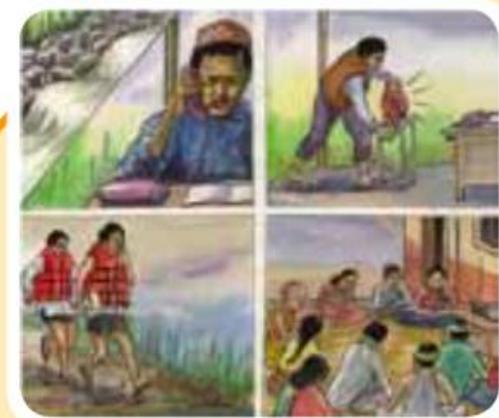

**Risk Knowledge**

**Monitoring &  
Warning Service**

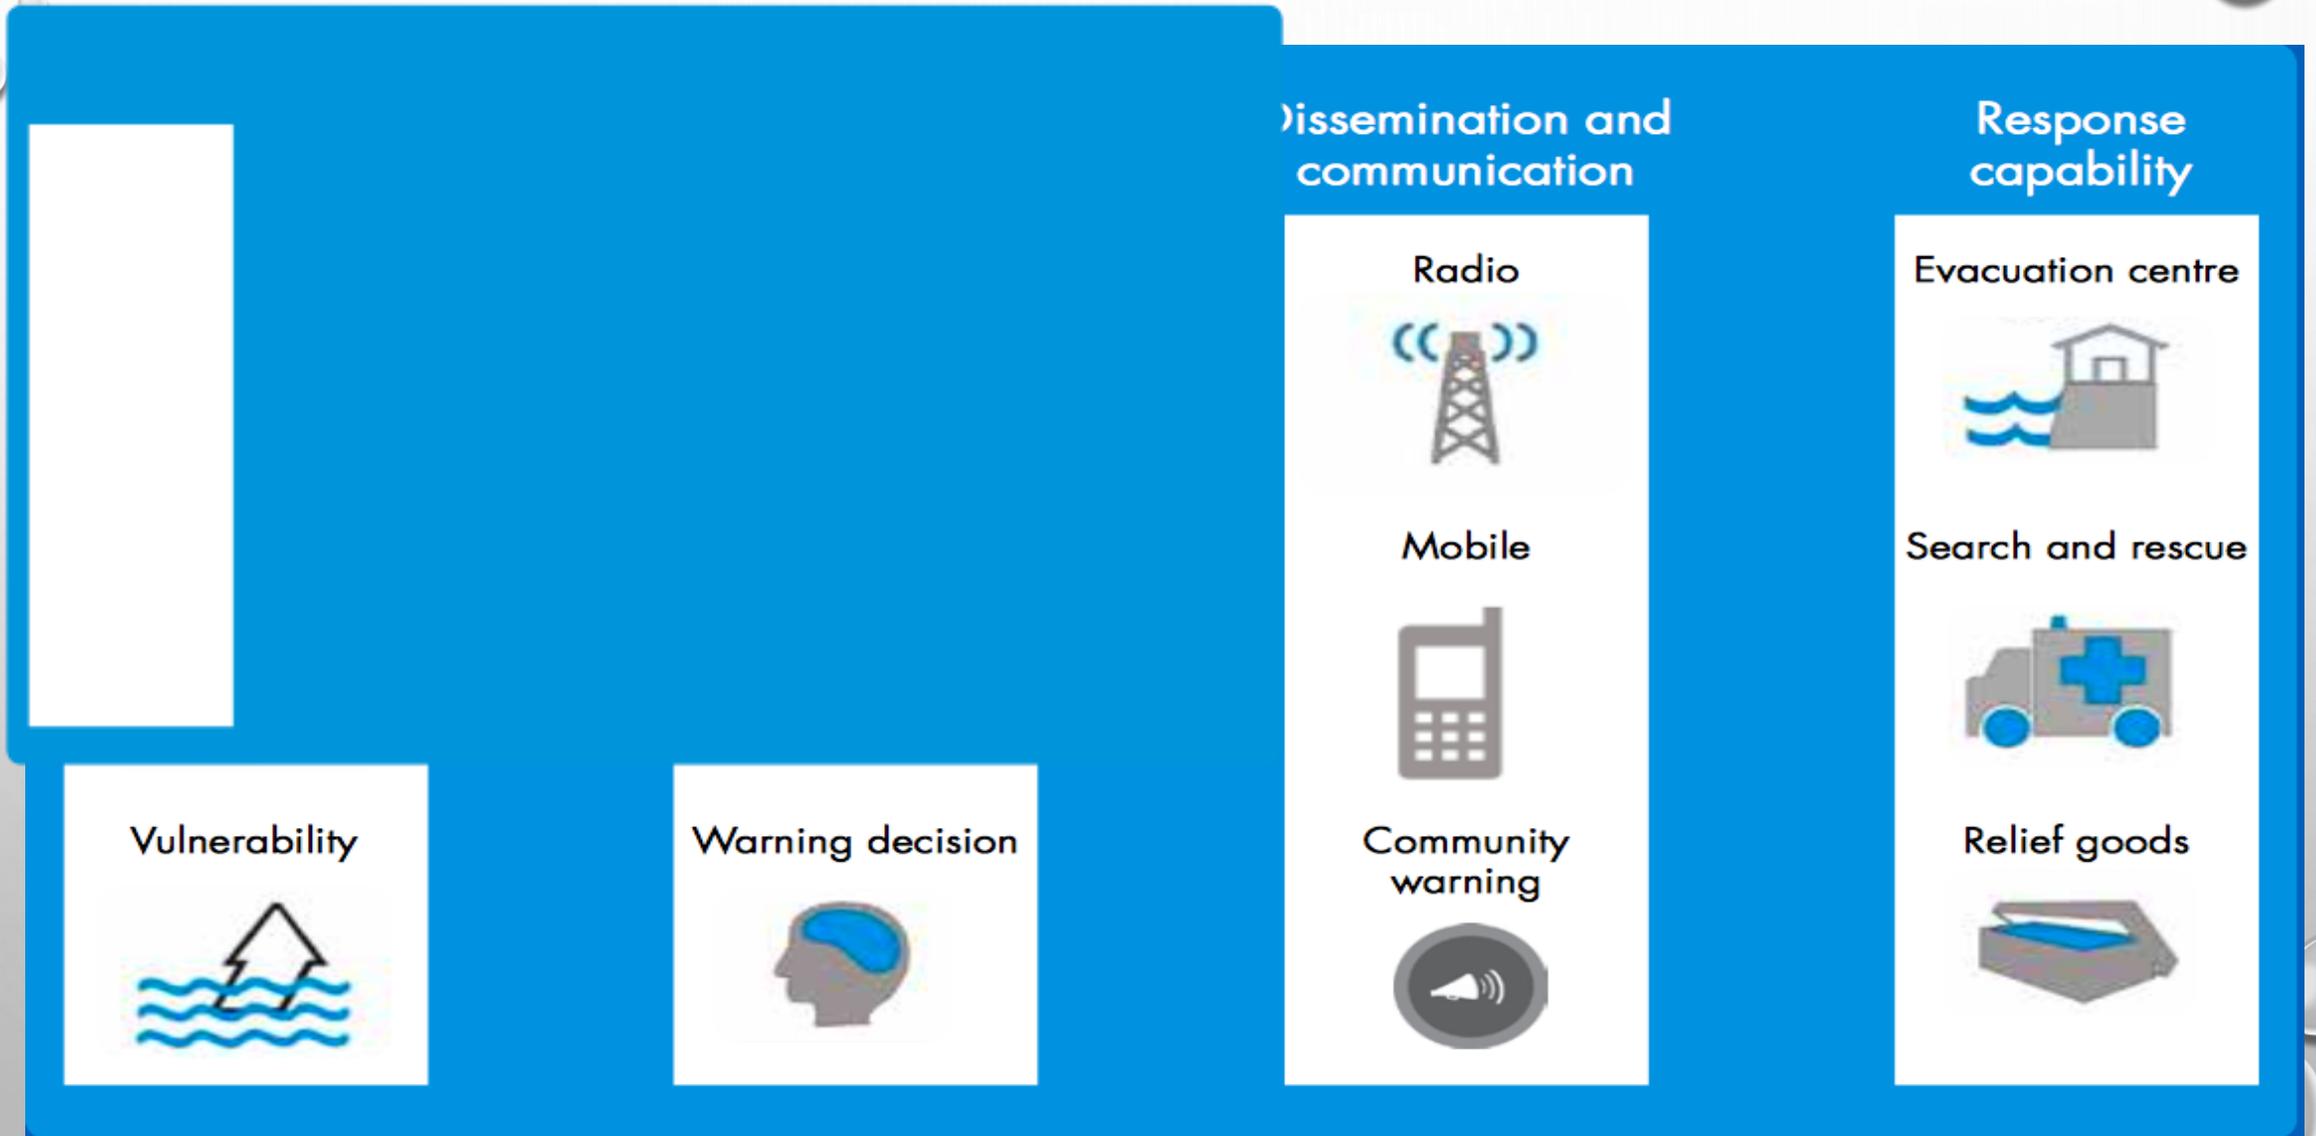

**Response Capabilities**

**Dissemination &  
Communication**

**Key Elements  
of  
Early Warning  
Systems**

# Components of a Flood Early Warning System

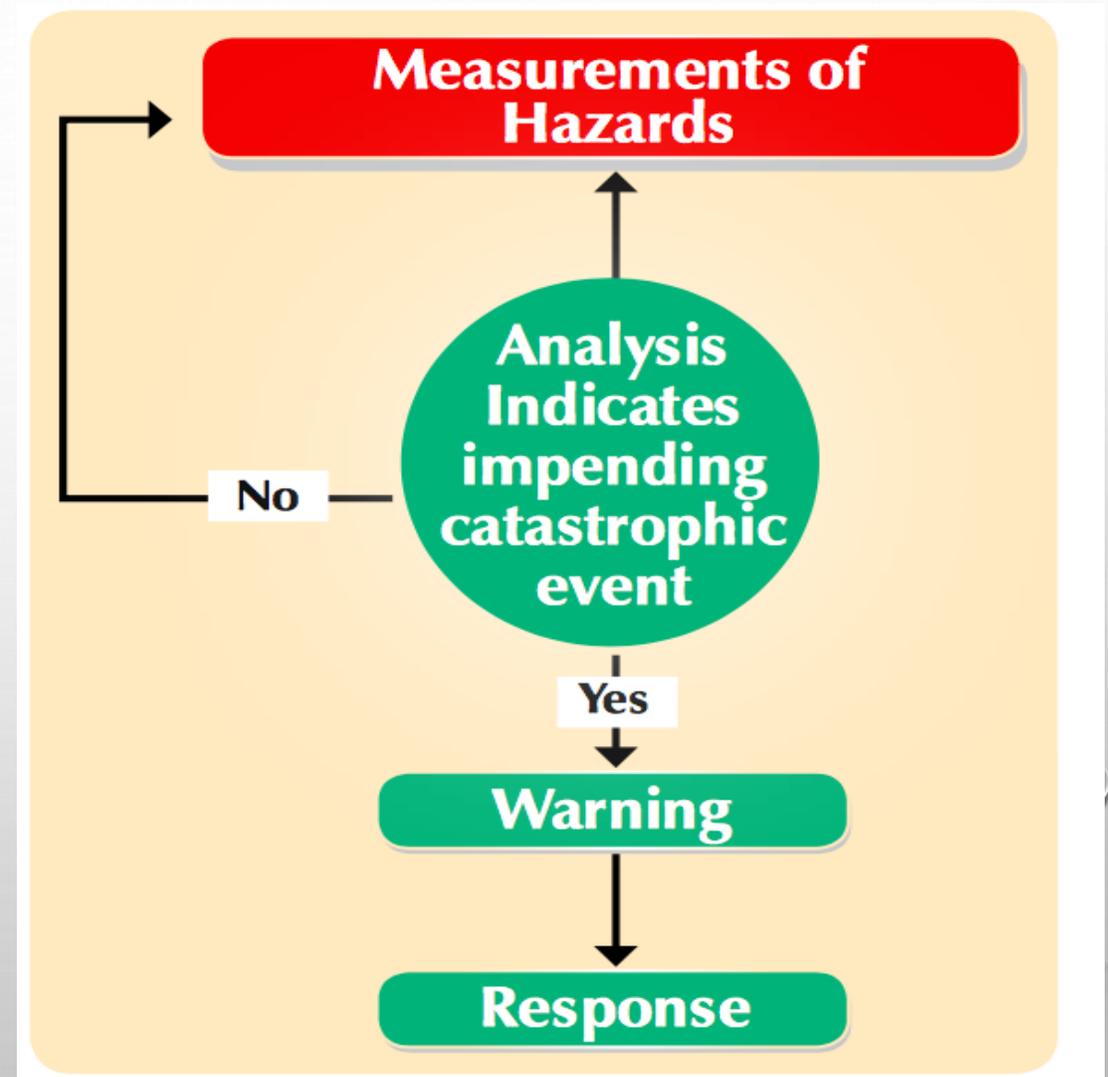

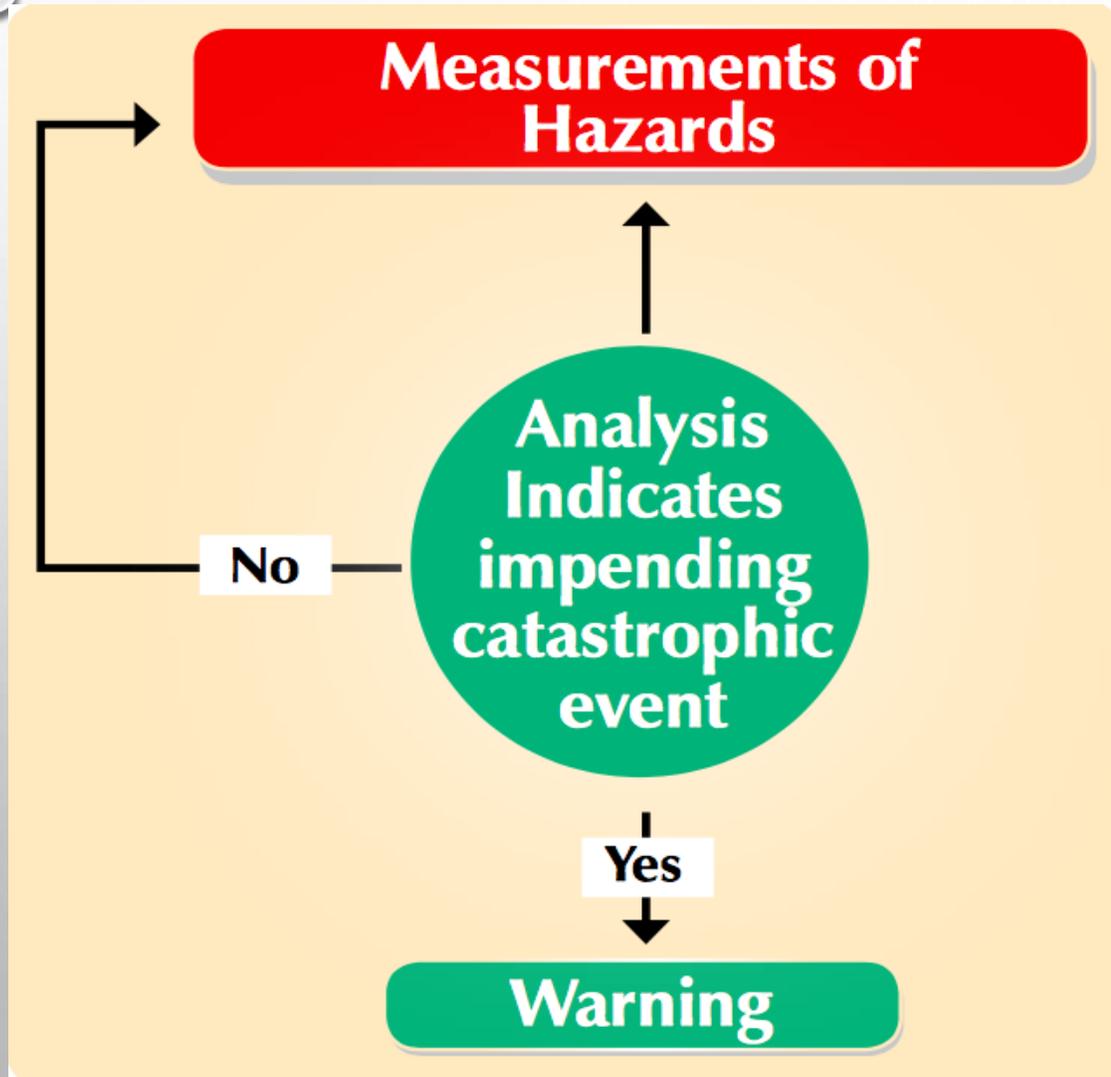

# **End to End Solution**

**Hazard detection to Community response**

# Traditional Vs Four Phases EWS

# Community Based EWS

- A system designed, operated and maintained by the communities.
- Community will explore external support from different individuals, communities, organizations and institutions.
- Community develops and maintains close coordination and links with different stakeholders.
- Community will lead all steps of establishment of the EWS.
- Community should own and contribute to the sustainability of system.

# Five Steps of Community Based EWS

Step V: Follow-up, Review & Sustainability

Step IV: Preparation for Response

**Step III: Communication and Dissemination**

Step II: Observation & Monitoring

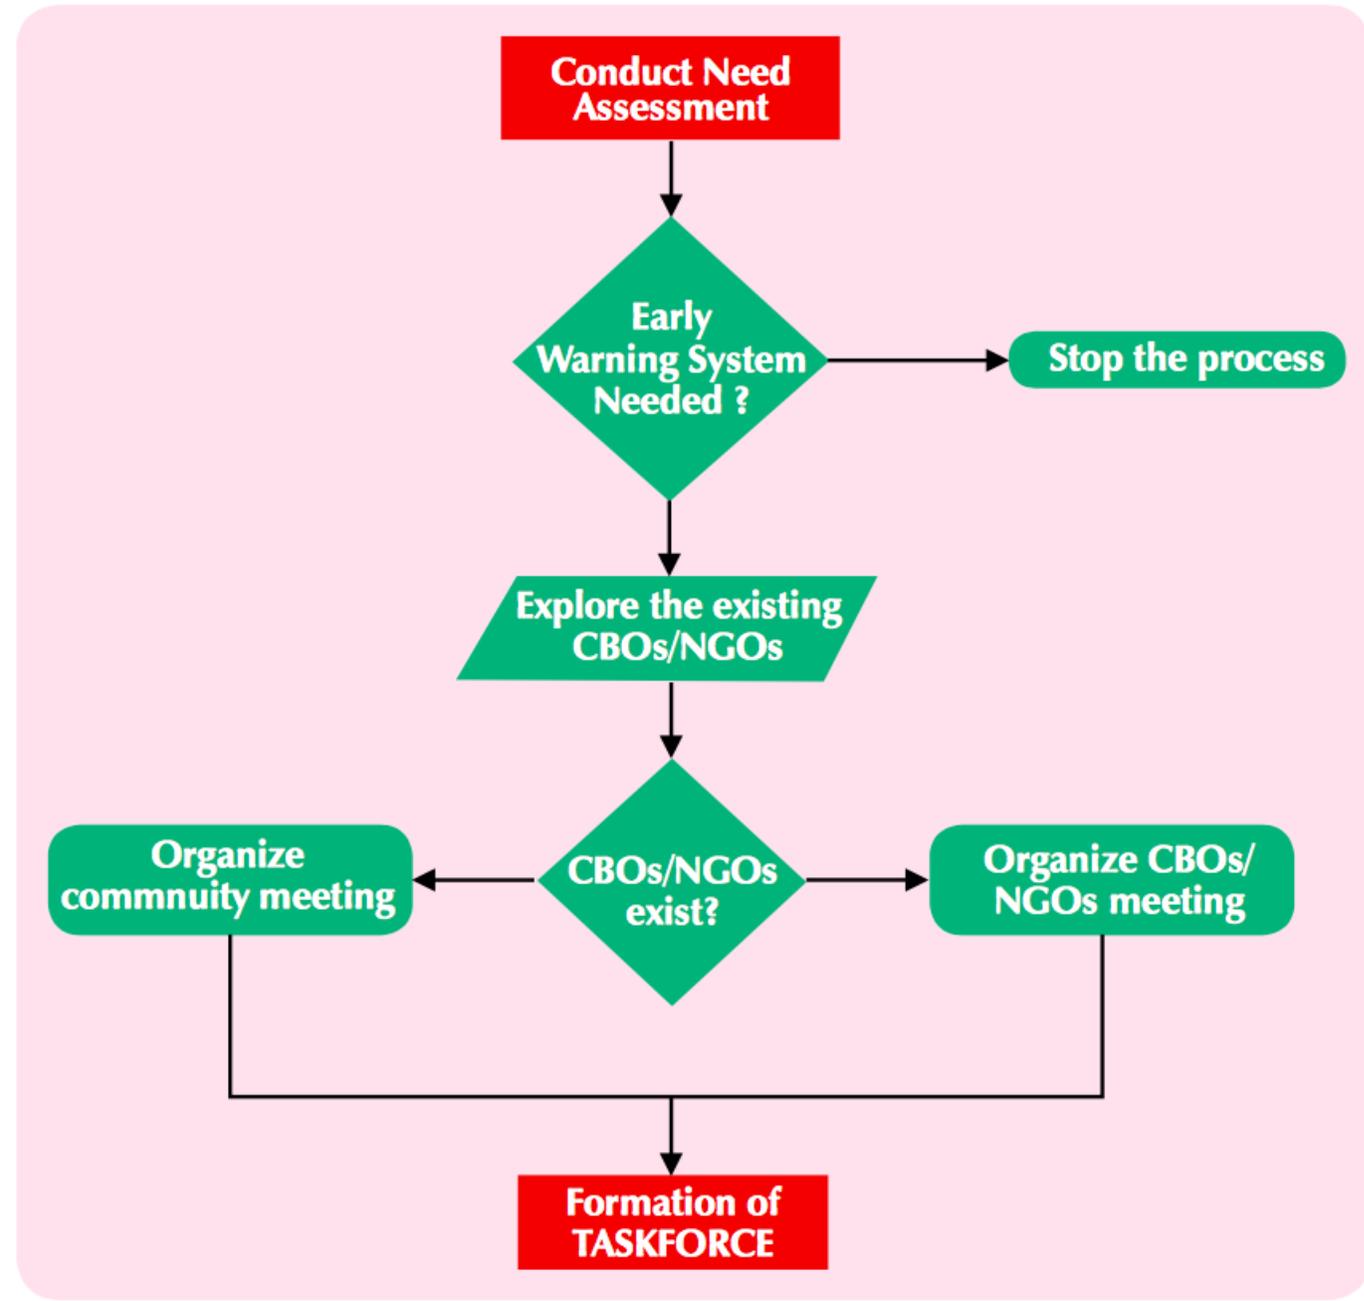

Step I: Participatory Situational Analysis

Step 0: Preparation

# Step 0 - Preparation

- Ensure that the establishment of EWS will mitigate the problems.
- The basic information should be collected in consultation with the community.
  - Frequency and severity of past hazards
  - Spatial characteristics
  - indigenous EW practices
  - vulnerable households and groups
  - existing social groups
  - capacity of the community
- Information analyzed and decision made (with the community) - whether establishment of an EWS will reduce the vulnerabilities of the community.
- The major criteria used are:
  - Frequency of hazard, Severity of hazards, Availability of sufficient lead time

# The Preparation Process

## Step III- Communications and Disseminations (C&D)

- Making warning prompt, targeted and informative; before, during & after emergency
- Communications from the right place, on the right time and to the right people.
- Follow principle of 'live and let them live' By Members and leaders of up and down stream, and flood prone community.
- Actionable Warning – likelihood impact
- Reliable and well organized
- Agreement on flow of information
- Understand by all stakeholders
- Effective & efficient to reach all end users
- Offer alternative methods/channels
- Use of different modes
- Local traditional system – relevance, effectiveness and feasibility
- Develop 'Community Communications Network'

## Steps to develop a C&D System:

- Identify existing C&D systems
- Identify the mechanism and medium for C&D system based on the information and level of risk
- Develop C&D plan with technical support from the concerned organizations.
- Identify roles and responsibilities of each stakeholder.
- Take into account the special need of selected community members (including hearing, visual and mentally impaired persons).
- Supply and install C&D tools and equipment. Prepare their O&M plan.
- Share agreed C&D plan to all community members and stakeholders. Develop inclusive IEC materials as per local need for awareness.

# Tools and Equipment

- Telephones
- Wireless radios
- Sirens (hand operated)
- Colored flags/light
- Hand mikes
- FM radio and television stations
- Social Media
- Websites
- Traditional methods

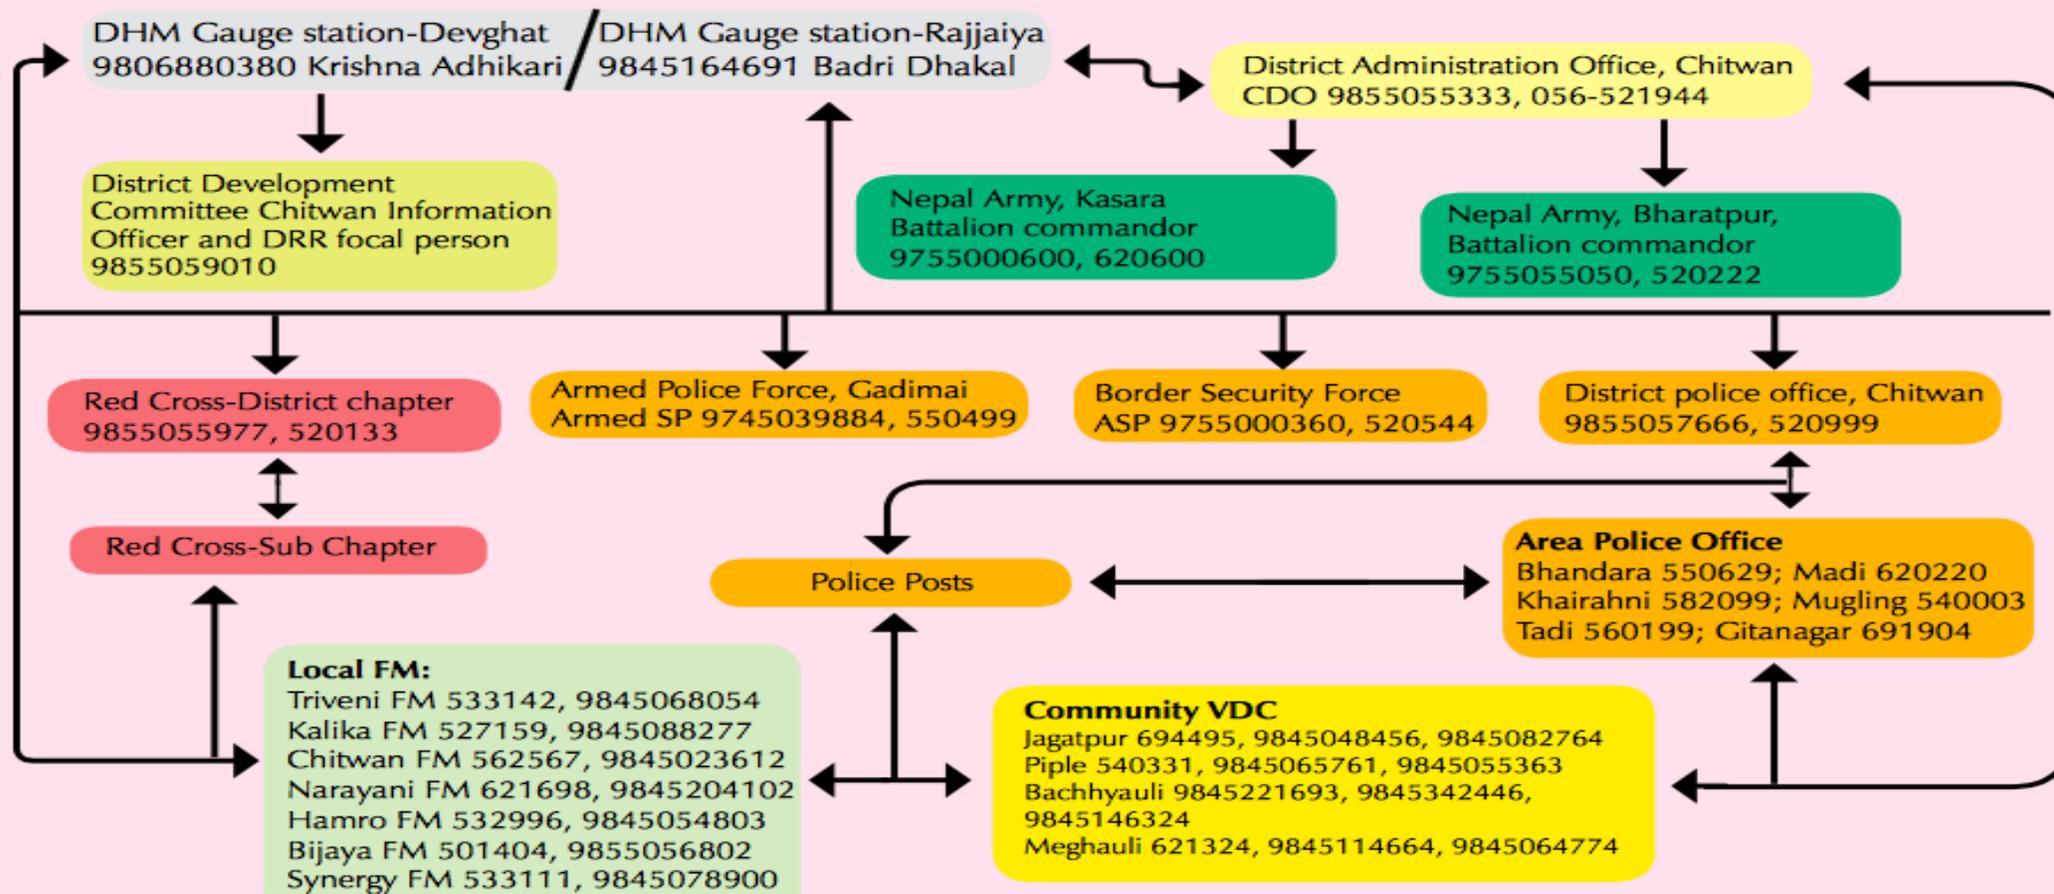

# Examples of C&D

# Communication Channel

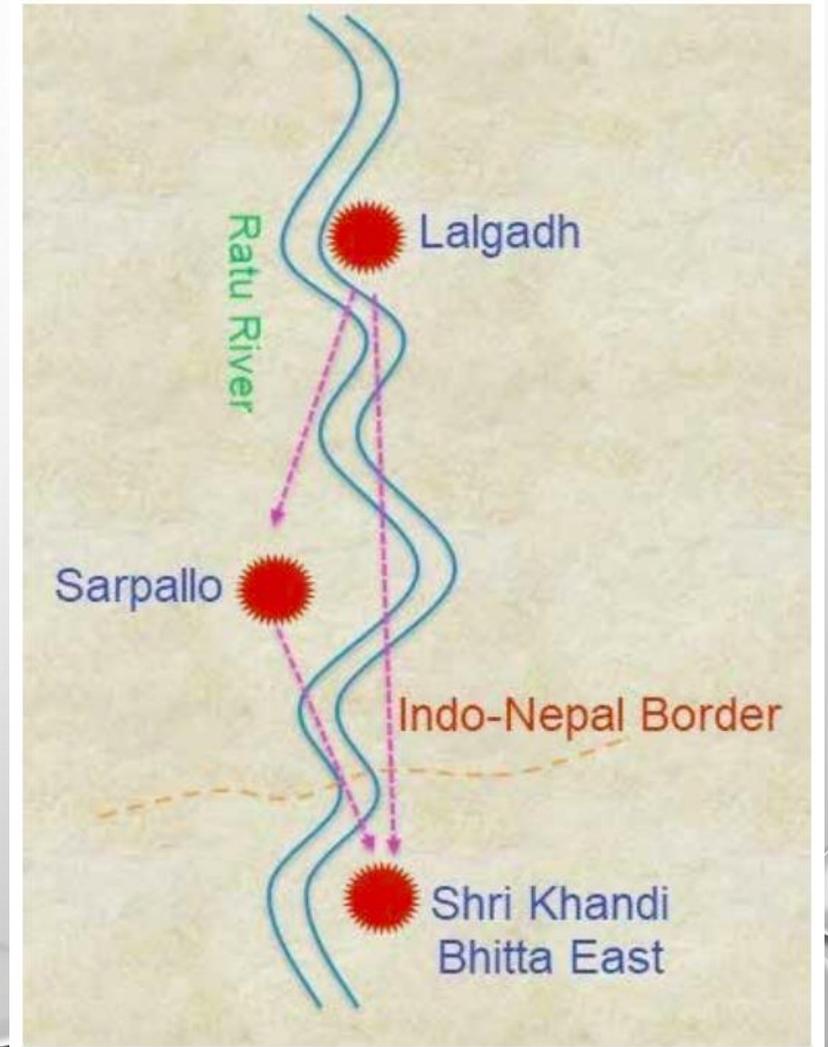

## District Level Early Warning Communication Channel

## Levels of Warning and their Interpretation

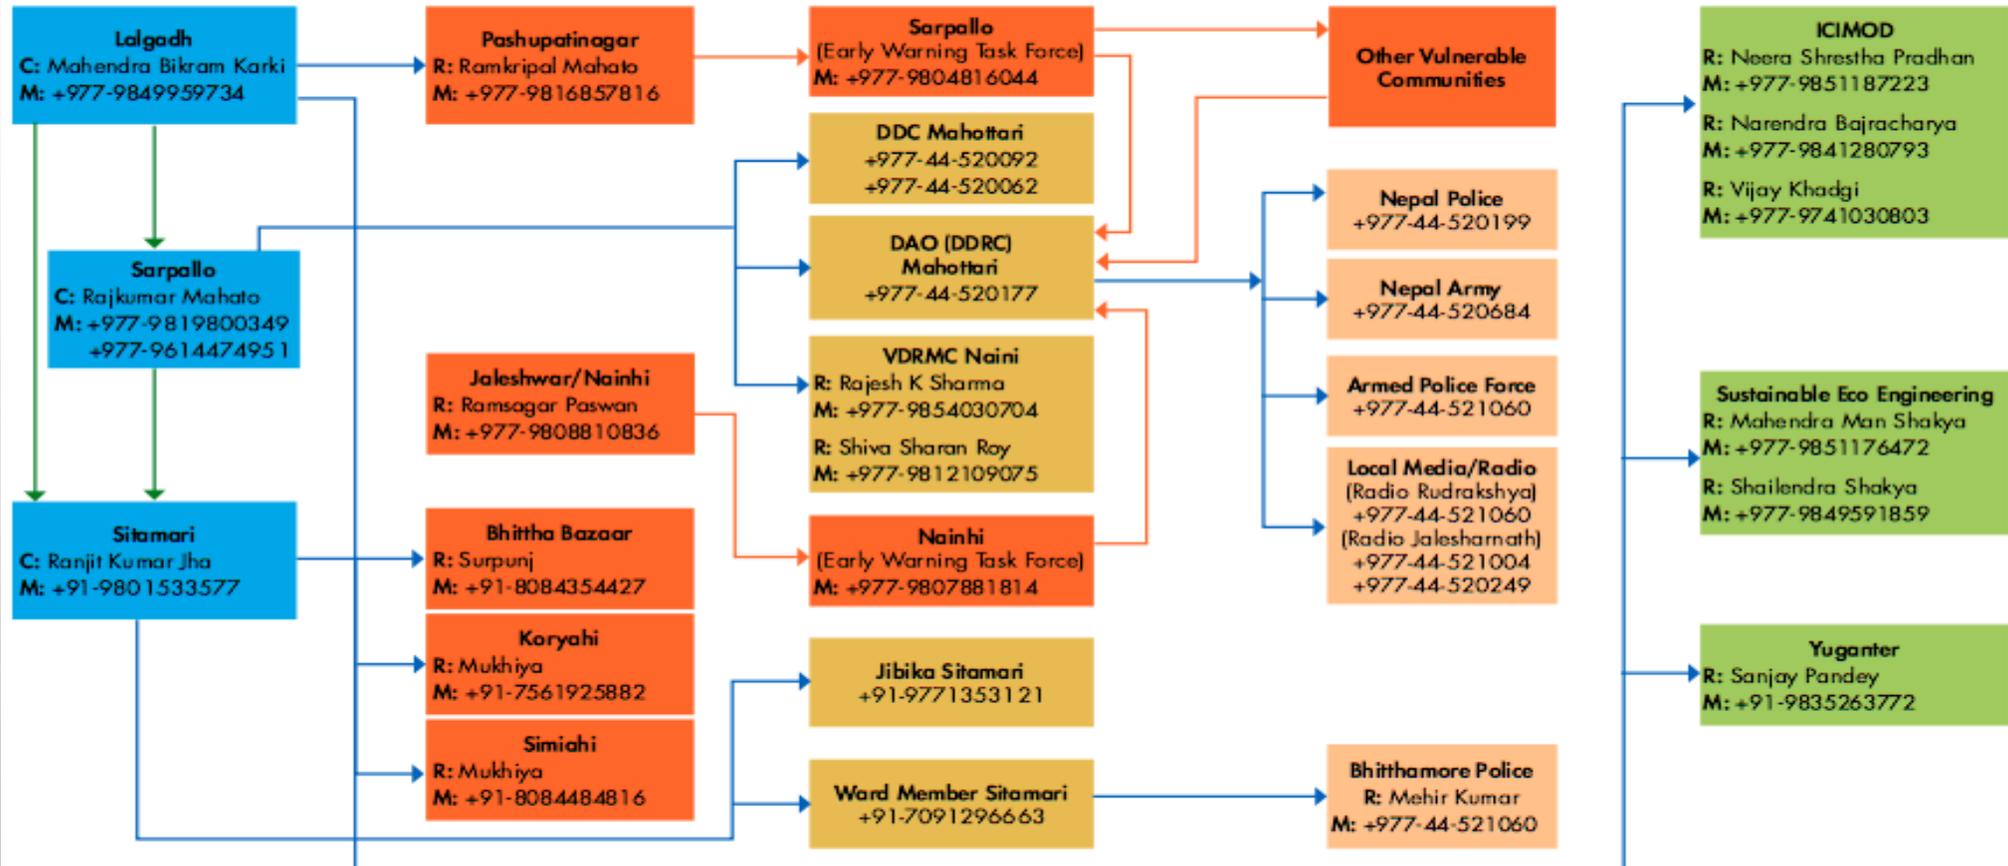

Warning Level	UPSTREAM		DOWNSTREAM	
	Color of Data indication	Siren signal	Interpretation	Action
Level 1		No siren	High probability of flood	Stay alert and on the standby
Level 2		Beeping sound	Flood is inevitable in a few hours	Be prepared
Level 3		Continuous ringing	Flood is coming	Evacuate for safety

## Information Flow- Ratu River

# Communication Channel – Ratu river

**Community Based Flood Early Warning System Communication Channel in Ratu River 2017**  
 \*Note: The channel is based on information collected in 2016 and 2017. The contact numbers may have changed.

→ Regular flood information flow  
 → Information flow in critical flood  
 → In case of external support needed

EWS Stations  
 Vulnerable Communities  
 Government Organizations  
 Implementing Agencies  
 Implementing Agencies

**USAID**  
FROM THE AMERICAN PEOPLE

**Nepal Red Cross Society, Jhapa**

# After EW – People evacuating-rescuing elders and children

# Recognizing and Understanding Warning Messages

## Examples of Signals

Warning Level	Level 1 Alert, Standby "Ready"	Level 2 Preparation "Get set"	Level 3 Evacuation "Go"
Precondition	One sound of the siren, long pause (repeated)	Two consecutive sounds of the siren, long pause (repeated)	Continuous sounds of the siren
For the person with the hearing impairment*	Green flags/lights	Yellow flags/lights	Red flags/lights

- Information should be short, clear and understandable
- Common understanding - EW system, Warning level and Communications channels
- Write-down the messages once received
- Ask to repeat to verify and confirm the message

## C&D Levels

- Upstream (gauge station) to community
- Within community
- Community to Community

## Level of Recipients of EW

<b>SOURCE</b>	Caretaker
↓	
<b>LEVEL 1</b>	District Authorities; Focal NGO; downstream focal person/s
↓	
<b>LEVEL 2</b>	Network of focal person/s in the immediate downstream vulnerable village
↓	
<b>LEVEL n</b>	Network of focal person/s in the consecutive downstream vulnerable village

## Key Actors of EWS

- Caretaker
- Local Organizations – LG, Line Agencies, FP
- Local Disaster Mgt. Authority
- FP Downstream vulnerable village
- Local Media
- **Flood Risk Management Committee**
- Other Actors – Private sector, Red Cross, Police and Army, local leaders & teachers

# Capacity Building

- Conduct Capacity Needs Assessment. Consider following common approaches targeting the local communities and other key stakeholders:
- Training
- Awareness raising (IEC material - posters, flayers, pamphlets, videos, street drama, door-to-door)
- Learning/Exposure Visits
- Equipping with relevant facilities
- Ensure System Operator has relevant knowledge and skills of C&D, and maintenance of the equipment. Main target audiences are:
  - Gauge observers Community leaders,
  - EW Management Committee members, Media and other stakeholders.

## Interaction with LDMC and DDMC on EWS

# Content of Capacity Building

- Identifying and analyzing the C&D channels
- Define roles and responsibilities of all key stakeholders
- Use of C&D medium
  - telephones
  - sirens (hand operated)
  - hand mikes
  - social media
  - wireless radios
  - colored flags/light
  - FM radio and TV stations
  - Website
- Maintenance of the tools and equipment
- Team building (up/down stream community, flood prone communities, other community members, Media)
- Effective communication skills

# Challenges

- Bridging the gap between those with information and those who do not
- Inadequate comm. systems to provide timely, accurate & meaningful infor.
- Lack of alternative channels to ensure outreach of information
- Poor quality of tel. systems and technology
- Lack of clarity in warnings issued
- Inadequate understanding of vulnerable groups and their needs
- Ineffective engagement of the media and private sector
- Failure of equipment
- Lack of community's trust in the information disseminated
- Obstruction in dissemination of information due to social structure
- Frequent movement of youngster
- Absence of user friendly tools and equipment
- Limited knowledge of alternative communication channels

# Challenges (Contd.)

- Conscious blending of indigenous knowledge and modern technologies
- Media role - mere informer to making community listen
- Mis-use of social media (rumor)
- Limited engagement of local government – protocols of C&D system
- Lack of standardized SOP on flood EW C&D
- Shifting to response centric to disaster preparedness
- Failure to understand the gravity of hazard and vulnerability
- Effective institution and governance
- Sustainability of the system- LG ownership
- Affording use of advance technologies
- Improved regional and transboundary collaboration
- Anticipate flood and be better prepared
- Use of EW information in re-building and recovery
- Verified location-specific information directly to the community
- Project based approach

# Discussion on Strengths, Weaknesses and Gaps in Communicating Flood Early Warning

## Nepal

Description	Strengths	Weaknesses	Gaps
<b>Hydromet services</b>			
<b>Generation of early warning and flood forecasting models</b>			
Flood Forecasting Models	<ul style="list-style-type: none"> <li>Confidence and accuracy;</li> <li>Understandable;</li> <li>Linked with DMA</li> </ul>	<ul style="list-style-type: none"> <li>Difficult for non-technical people to understand;</li> <li>Uncertainty in rainfall forecast;</li> <li>Limited trained human resources</li> <li>Inadequate ICT</li> </ul>	<ul style="list-style-type: none"> <li>National and basin level rainfall forecasts for flood forecasting</li> </ul>
Global models	<ul style="list-style-type: none"> <li>Increased lead-time for early action;</li> <li>Free of cost;</li> <li>Node can be added at any place</li> </ul>	<ul style="list-style-type: none"> <li>Less accuracy;</li> <li>Dependency on others</li> </ul>	
<b>Products and packaging of early warning for dissemination</b>			
Flood bulletin	<ul style="list-style-type: none"> <li>Strong lifesaving message;</li> <li>Means of preparedness</li> </ul>	<ul style="list-style-type: none"> <li>Limited to certain groups (email users only)</li> </ul>	
Advisories	<ul style="list-style-type: none"> <li>Easy to self-plan, very helpful in harvesting and planting crops</li> </ul>		
Means of communication, language and frequency	<ul style="list-style-type: none"> <li>Followers of social media (Facebook and Twitter) reaching out to larger groups</li> </ul>	<ul style="list-style-type: none"> <li>Only in Nepali language-local language</li> <li>Not accessible or limited to end users</li> </ul>	<ul style="list-style-type: none"> <li>Local language</li> </ul>
<i>Mechanism of feedback?</i>	<ul style="list-style-type: none"> <li>Toll-free number and social media for feedback</li> </ul>	<ul style="list-style-type: none"> <li>Limited social media users</li> </ul>	
<i>Transboundary early warning</i>	<ul style="list-style-type: none"> <li>Community-community linkage social cohesion</li> </ul>	<ul style="list-style-type: none"> <li>No data sharing between Tibet (China) and Nepal</li> <li>No institutional/ governmental linkages</li> </ul>	<ul style="list-style-type: none"> <li>No policy on transboundary EWS</li> </ul>

# Discussion on Strengths, Weaknesses and Gaps in Communicating Flood Early Warning

Disaster management authority			
<i>Dissemination of early warning, who are the recipients?</i>	<ul style="list-style-type: none"> <li>Extend institutional structures up to community level (TFs and CDMCs);</li> <li>Local governments in place</li> </ul>	<ul style="list-style-type: none"> <li>Area coverage is limited (project based only);</li> <li>Limited awareness; limited capacity of local governments and end users</li> </ul>	<ul style="list-style-type: none"> <li>Sustainability</li> </ul>
<i>Coordination between various agencies and end users</i>	<ul style="list-style-type: none"> <li>Coordination and collaboration among all stakeholders</li> </ul>	<ul style="list-style-type: none"> <li>Limited project-based area coverage</li> </ul>	<ul style="list-style-type: none"> <li>Community underrepresented in district level mechanism</li> </ul>
<i>Means of communication, language and frequency: SMS, phone, media, website</i>	<ul style="list-style-type: none"> <li>Social media (Facebook and Twitter) – reaching out to larger groups;</li> <li>Toll free #, website with visual displays, twice a day in monsoon as and when required;</li> <li>Maps, texts and graphs</li> </ul>	<ul style="list-style-type: none"> <li>Limited to certain groups (email users only);</li> <li>Limited internet service: solar power backup</li> </ul>	
Civil society, research organizations			
<i>Community awareness and capacity building</i>	<ul style="list-style-type: none"> <li>Community level structures (TFs and CDMCs);</li> <li>Training on CBFWS</li> </ul>	<ul style="list-style-type: none"> <li>Limited or project based;</li> <li>No clear policy on roles of the local government</li> </ul>	Continuity
<i>Coordination among various agencies and end users</i>	<ul style="list-style-type: none"> <li>Strong mechanism all the way up to community level;</li> <li>Increase in number of supporting agencies</li> </ul>	<ul style="list-style-type: none"> <li>Lack of effective coordination among stakeholders</li> </ul>	<ul style="list-style-type: none"> <li>Institutional relations lacking</li> </ul>
<i>Means of communication; language and frequency</i>	<ul style="list-style-type: none"> <li>HF radio set;</li> <li>Community level TFs</li> </ul>	<ul style="list-style-type: none"> <li>Limited to DEOC (around 56-573 local agency)</li> </ul>	<ul style="list-style-type: none"> <li>Project-based operators</li> </ul>
<i>Addressing gender and differentiated vulnerabilities</i>	<ul style="list-style-type: none"> <li>Gender focal points</li> </ul>		

# Way Forward

## Technical

- Nation wise multi-hazard risk assessment mapping (basin and sub-basin);
- Atomization of hydro-metrological stations
- Expand the telecom network to all places;
- Inclusive technology (visible, sound and signage) for dissemination of information;
- Alternative means of communication (VHF, radio - wave/satellite based);
- Use of social media and mobile apps;
- Capacity building up to local level
- Risk Based Warning and Impact based forecasting

## Institutional/Governance

- Formulate FEW guidelines in line with the existing act, policy, and SAP;
- Integrated approaches to multi-hazard risk assessment mapping (basin and sub-basin)
- LGs ownership of existing monitoring stations and establishment of new ones;
- Vertical collaboration between institutional setups and EWS system NEOC to LEOC;
- Proper communication channels (vertical and horizontal);
- Institutionalize task forces (EWS, search & rescue, first aid.) In LGs
- Forecast based Financing
- Clarity of treaties with India and China

## Socio-Cultural

- Diverse messages reaching diversified target audiences: language, social norms and values;
- Integrate social and cultural norms in stations establishment and capacity strengthening of most vulnerable;
- Gender sensitive response actions
- Tailor to diversity
- Guided through one door system
- attract local government's budget and allocate budget from all government levels
