

UN-SPIDER Spatial data Repository to monitor the SFDRR

Role of Earth observation in Multi-hazard disaster risk assessment and monitoring targets of the Sendai Framework” 4–8 December 2019

Disaster Management Centre (SDMC) at Gujarat Institute of Disaster Management (GIDM), India

UNITED NATIONS
Office for Outer Space Affairs

SFDRR 2015 - 2030

- **Adopted** at the **Third UN World Conference on Disaster Risk Reduction** (March 18, 2015)
- **Endorsed** by the **UN General Assembly** (May 15, 2015)
- 15-year, voluntary, non-binding agreement with 4 Priorities for Action and 7 Global Targets

Sendai Framework monitoring

Scope: The SFDRR applies to risk of small and large, frequent & infrequent, sudden & slow disasters caused by natural or manmade hazards across all level

Expected outcome: To substantially reduce existing disaster risk & losses in lives, livelihoods also economic, social, env, assets of persons business, community or country

Goals: Prevent and reduce existing disasters through multiple measures to prevent, reduce hazard exposure & vulnerability to disasters & increase preparedness for response & recovery. Thus strengthen resilience

United Nations

A/71/644

General Assembly

Distr.: General
1 December 2016

Original: English

Seventy-first session
Agenda item 19 (c)
Sustainable development: disaster risk reduction

**Report of the open-ended intergovernmental expert
working group on indicators and terminology relating to
disaster risk reduction**

Priorities of Action (can't be monitored)

4 PRIORITIES FOR ACTION	Priority 1 Understanding disaster risk <i>Policies and practices for DRR should be based on an understanding of disaster risk in all its dimensions of vulnerability, capacity, exposure of persons and assets, hazard characteristics and the environment.</i>	National and local dimensions	Regional and global dimensions
	Priority 2 Strengthening disaster risk governance to manage disaster risk <i>Disaster risk governance at the national, regional and global levels is of great importance for an effective and efficient management of disaster risk.</i>		
	Priority 3 Investing in disaster risk reduction for resilience <i>Public and private investment in DRR are essential to enhance the economic, social, health & cultural resilience of persons, communities, countries, their assets, as well as environment</i>		
	Priority 4 Enhancing disaster preparedness for effective response, and to “Build Back Better” in recovery, rehabilitation and reconstruction <i>Strengthened disaster preparedness for response, recovery, rehabilitation and reconstruction are critical to build back better</i>		

Targets (could be monitored)

7 GLOBAL TARGETS	Reduce	Increase
	Mortality/ global population 2020-2030 Average << 2005-2015 Average	Countries with national & local DRR strategies 2020 Value >> 2015 Value
	Affected people/ global population 2020-2030 Average << 2005-2015 Average	International cooperation to developing countries 2030 Value >> 2015 Value
	Economic loss/ global GDP 2030 Ratio << 2015 Ratio	Availability and access to multi-hazard early warning systems & disaster risk information and assessments 2030 Values >> 2015 Values
	Damage to critical infrastructure & disruption of basic services 2030 Values << 2015 Values	

Geospatial technology application for monitoring the SFDRR 2015-2030

Space-based technologies

Geospatial technologies

Geographical Information Systems (GIS)

Remote sensed earth observation

Par: 24c, 24f, 25c, and 25g

- United Nations Statistics Division(UNSD)
- United Nations Committee of Experts on Global Geospatial Information Management (UN-GGIM)
- UNOOSA (UN-SPIDER)
- World Bank - Global Facility for Disaster Risk Reduction (GFDRR)
- Disaster Related Statistical Framework (DRSF)

Identified SFDRR Targets which could be monitored by Geospatial information

Target B: The number of affected people

Indicators

- 1) B-3 People with damaged dwellings
- 2) B-4 People with destroyed dwellings
- 3) B-5 People with disrupted and destroyed livelihoods

Target C: Economic loss in relation to gross domestic product(USD- $\$$)

Indicators

- 1) C-2 Direct agricultural loss
- 2) C-4 Economic loss in the housing sector
- 3) C-5 Economic loss resulting from damaged and destroyed critical infrastructure

Target D: Damage to critical infrastructure and basic services

Indicators

- D-2 Destroyed and damaged health facilities
- D-3 Destroyed and damaged educational facilities
- D-4 Destroyed or damaged critical infrastructure units
- D-5 Disruption to basic services

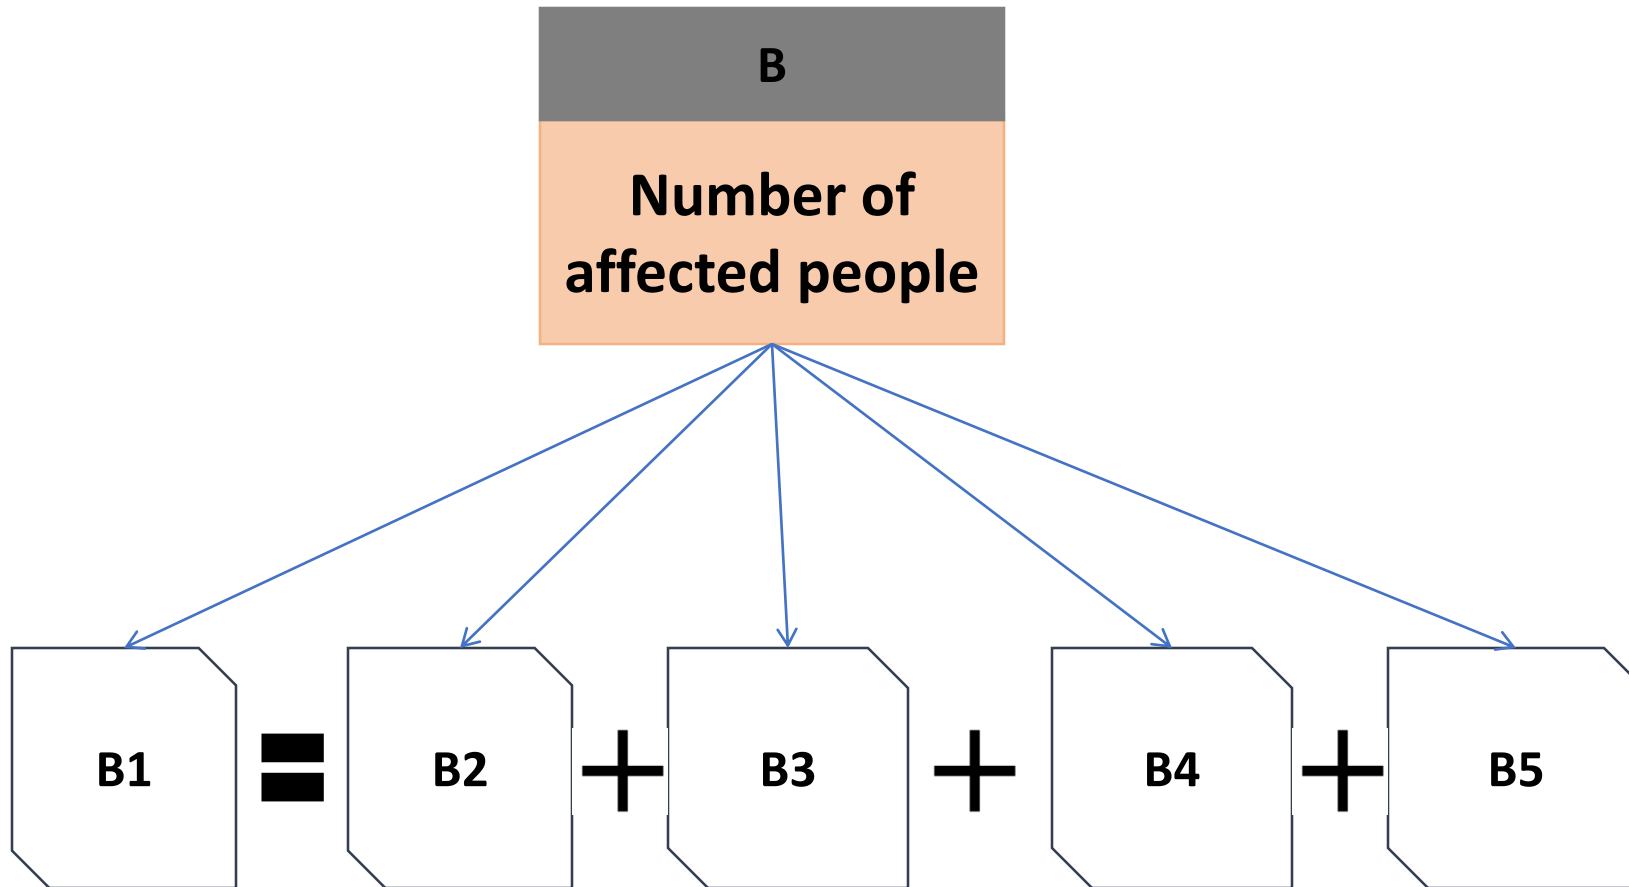

UNITED NATIONS
Office for Outer Space Affairs

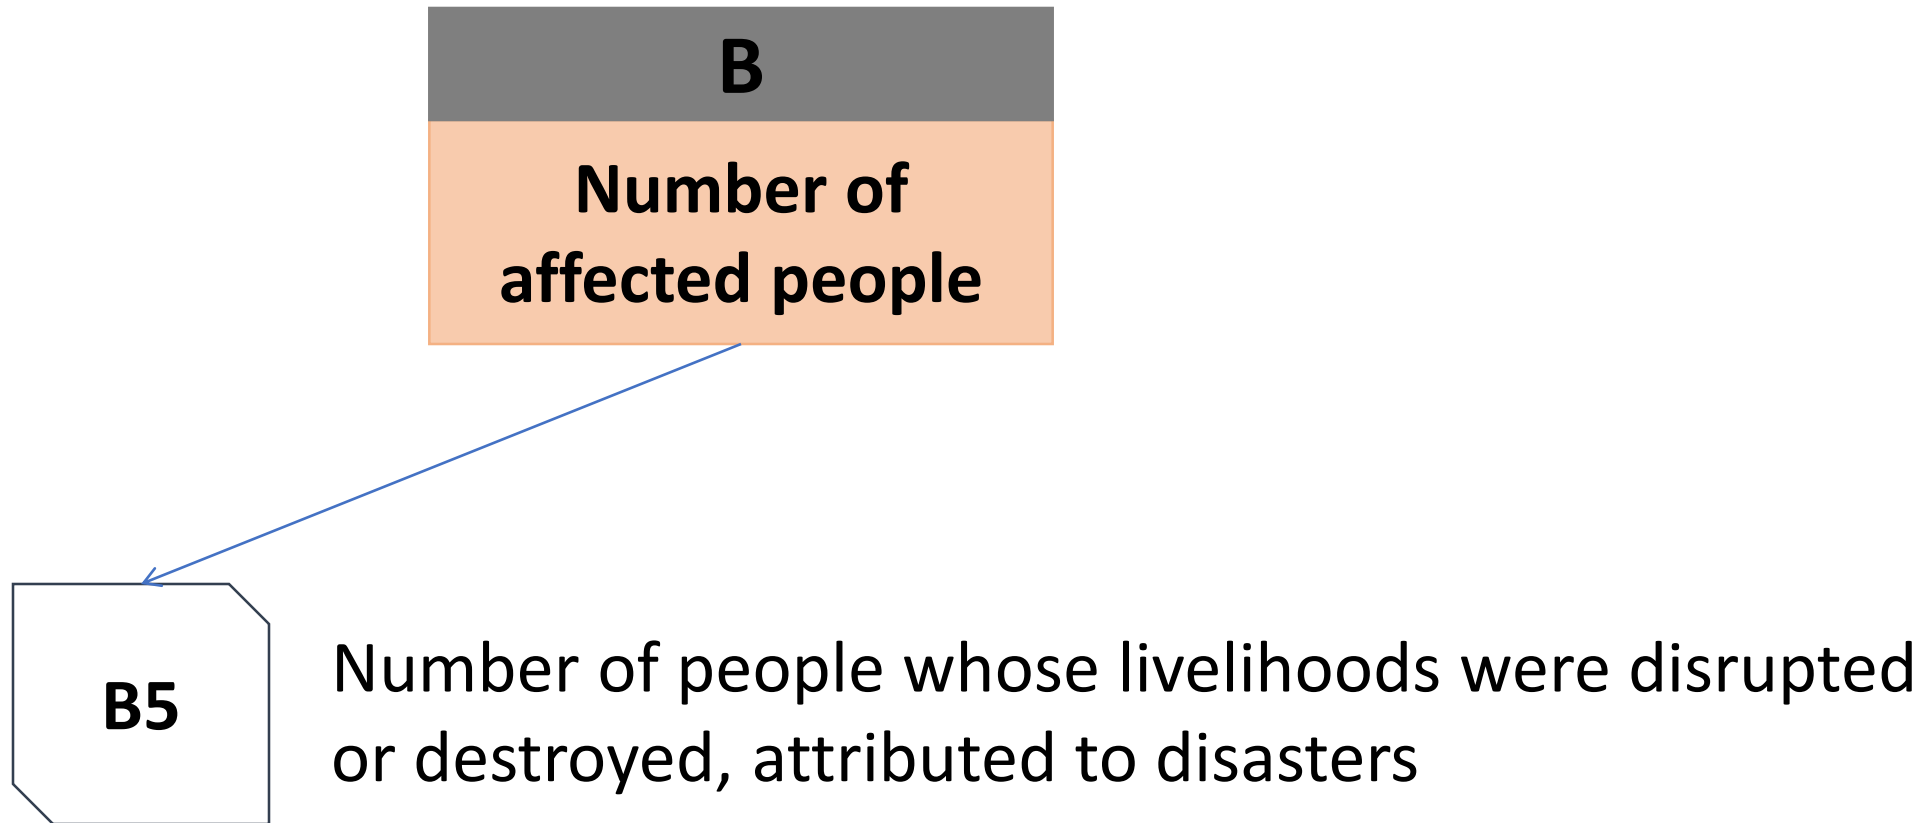

38 Indicators

38 Indicators

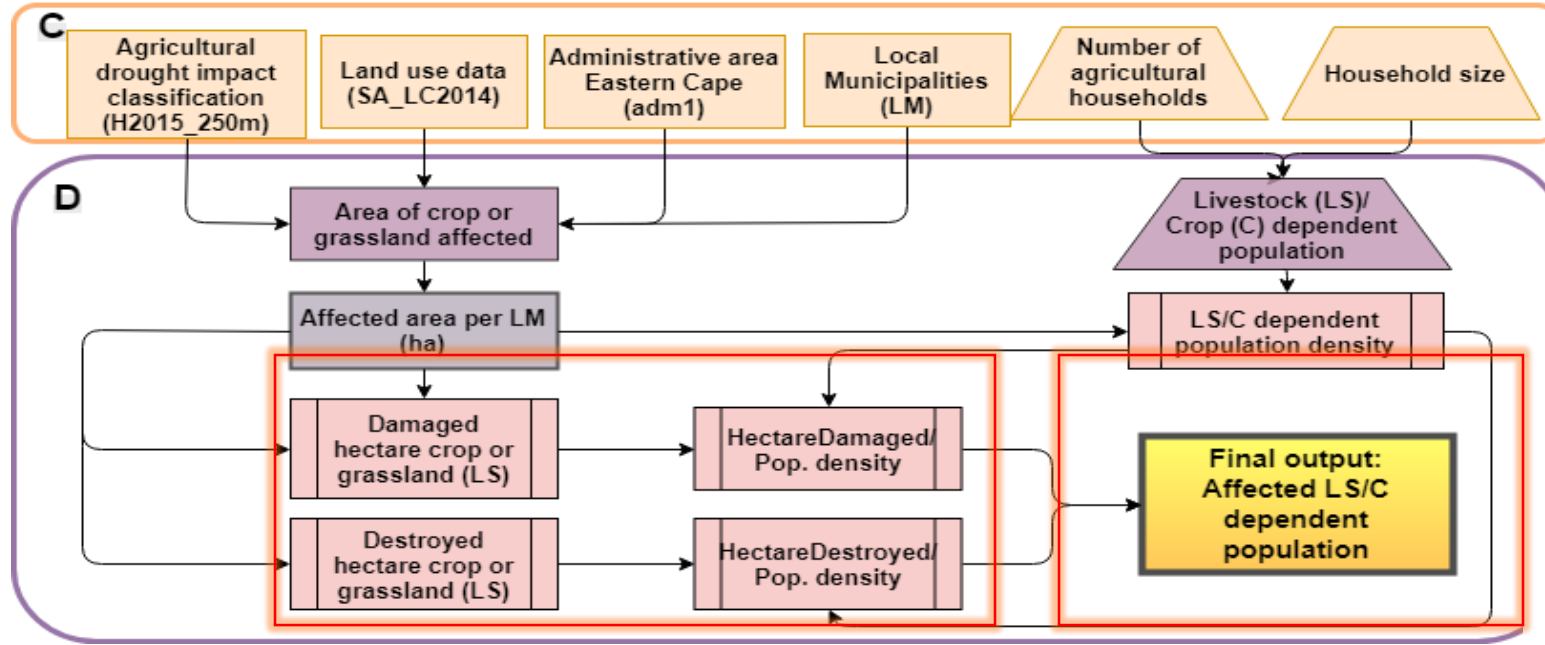

EVIDENZ

Resources required for monitoring sub-target B5

- 1 Agricultural drought impact map
- 2 Administrative border shape file of the municipality
- 3 Statistical data from Statistics South Africa
- 4 Land cover / land use maps
- 5 Other information...

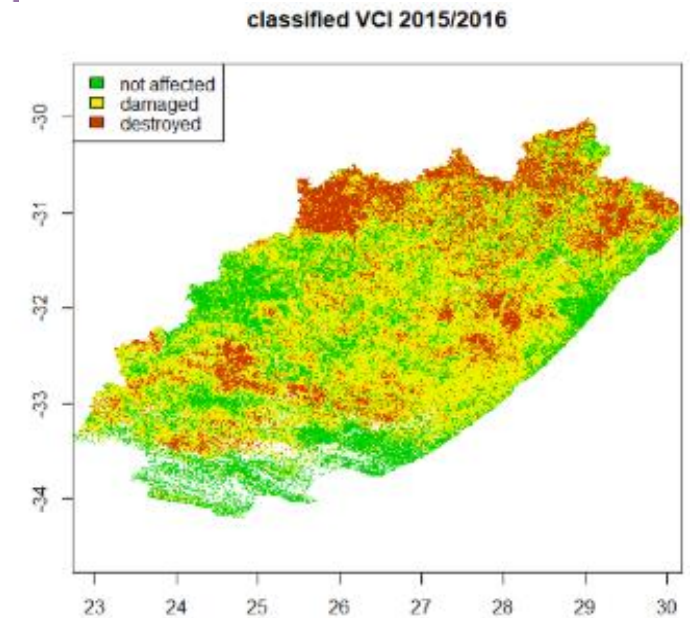

Affected crop dependant poulation = H1 + H2

Affected livestock dependant poulation = H1 + H2

Affected poulation
= Affected livestock dependant poulation
+ Affected crop dependant poulation

Sendai Monitoring

The screenshot shows the web interface for the Sendai Monitor Training Server. At the top, there is a navigation bar with 'UNDRR' and 'PreventionWeb' on the left, and 'English' with a dropdown arrow on the right. Below this is a yellow banner that reads 'You are using the training environment.' The main content area features a background image of a woman in a blue patterned shirt and white headscarf, holding a large bundle of straw. On the left side, there is a logo for the 'SENDAI FRAMEWORK FOR DISASTER RISK REDUCTION' consisting of four colored squares (red, purple, orange, teal). Below the logo are two buttons: 'HOME' (orange) and 'ANALYTICS' (white). In the top right corner of the main area, there is a 'LOGIN' link. The central text reads 'MEASURING IMPLEMENTATION OF THE SENDAI FRAMEWORK'. Below this, there is an 'ANNOUNCEMENT' section with the title 'Sendai Monitor Training Server' and the text 'This is the training system for the Sendai Framework Monitor.'

Mortality

People affected

Economic loss

Critical
infrastructure &
services

Disaster risk
reduction strategies

International
cooperation

Early warning and
risk information

GLOBAL TARGETS: Reporting

-  Metadata
-  Mortality
-  **People affected**
-  Economic loss
-  Critical infrastructure & services
-  Disaster risk reduction strategies
-  International cooperation
-  Early warning and risk information

Target B STATUS: Ready for validation

Substantially reduce the number of affected people globally by 2030, aiming to lower the average global figure per 100,000 between 2022-2030 compared to 2005-2015.

B-1 Number of directly affected people attributed to disasters, per 100,000 population

2017	2018	BASELINE: 2005-2014
		N/A

[CALCULATE COMPOUND INDICATOR B-1](#)

+ B-2 Number of injured or ill people attributed to disasters Ready for validation

+ B-3 Number of people whose damaged dwellings were attributed to disasters Not started

+ B-4 Number of people whose destroyed dwellings were attributed to disasters Not started

+ B-5 Number of people whose livelihoods were disrupted or destroyed, attributed to disasters Not started

Disaster Risk Reduction (DRR)

Spatial Data Repository

- An online geospatial dashboard containing possible data combination for SFDRR monitoring
- Sri Lanka as pilot country (DMC)
- To be transferred to the South Asian Association for Regional Cooperation (SAARC)
Afghanistan, Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan and Sri Lanka
- Corporation at SAARC level to be with the SDMC

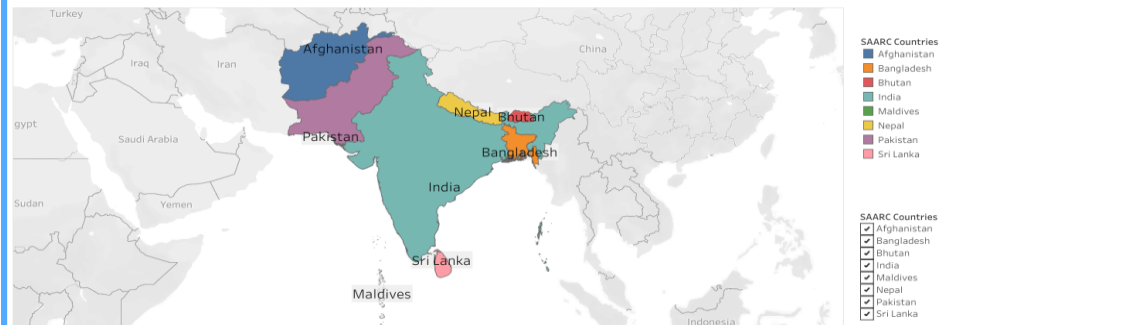

Types of data & the Spatial repository

- Online platform
- Baseline geospatial information for reporting SFDRR
- Socio-economic data
- Other in-situ data
- Achieve of previous disasters

This project is established in response to the request made by the government of Sri Lanka to the UN-SPIDER office Beijing for support in the preparation of baseline information for reporting of the Sendai Framework for Disaster Risk Reduction (SFDRR).

The project is envisioned to eventually cover the rest of the South Asian Association for Regional Cooperation(SAARC). Sri Lanka and the rest of the SAARC countries have a high population and has experienced repeated large-scale disasters over the years which lead to the development of the SAARC Comprehensive Framework on Disaster Management by the heads of states and governments during the 13th SAARC summit in Dhaka, 12-13 November 2005.

Archive earth observation data products, as well as socio-economic and other in-situ data covering the period of the Hyogo Framework (2005-2015) and SFDRR (2015-2030), will be gathered, and comprehensively presented in this spatial data repository.

From the 38 indicators of the Sendai Framework for Disaster Risk Reduction (SFDRR) which should be monitored for the progress in disaster risk reduction, it will be determined which of the Sendai framework indicators could be monitored using Earth Observation and the suitable spatial data sources required.

The identified indicators and data which are suitable the SFDRR in Sri Lanka would be then transferred to other countries within the SAARC region. This would enable the establishment of the space-based geospatial information database which could support disaster emergency response, SFDRR monitoring and implementation.

Some of the key challenges of DRR in the SAARC region according to the post-2015 DRR Framework for Saarc Region -SDMC are:

- Points of action and roadmaps are legally not binding resulting in lack of accountability by the member states in implementing them;
- South Asia is a data scarce region, datasets on natural hazards at micro level are not available;
- capacity gaps existing in the region;
- there is no regional coordination mechanism to bring in all the stakeholders working in the region together.

Sri Lanka

Climate-related hazards continue to pose significant risks to Sri Lanka. In the dry zones (northern and eastern parts of the country), weather patterns in recent years have led to more frequent and longer droughts while in the wet zones (south-western region), higher and less predictable rainfall has triggered frequent and intense flooding. From 2000 to 2016, a total of 47 disaster events (including tsunami, drought, floods, landslides, tropical cyclones) affected 14 million people and caused 37,200 fatalities (mostly from the 2004 Indian Ocean tsunami) See Sri Lanka country profile (UN Office for the Coordination of Humanitarian Affairs- OCHA).

The interactive charts (1 and 2) below present an overview of some major disaster occurrences in Sri Lanka by province, year and the type of disasters.

The aim of this project is to develop a list of data sources in the form of a geospatial repository which will aid the monitoring of the Sendai Framework for Disaster Risk Reduction (SFDRR). In order to monitor the progress SFDRR implementation the "Technical guidance for monitoring and reporting on progress in achieving the global targets of the Sendai Framework for Disaster Risk Reduction" is used. The purpose of this document is to support the refinement and finalization of the technical guidance for countries reporting on the indicators to monitor achievement of the global targets of the Sendai Framework for Disaster Risk Reduction 2015 - 2030, which is the successor of the Hyogo Framework for Action 2005 - 2015.

Click to get back to menu: Practical Examples of Monitoring SFDRR Targets

Target C

The third target only has one element – a ratio of the global direct economic loss per global GDP.

At present the average annual loss as per the GAR 2015 is about USD 250 billion. According to the Figure 2 below, direct economic losses have increased by 230% from 1990 to 2011. This means that by 2030, it is possible that unchecked, economic losses can reach USD 750 billion.

Table 2: Global GDP and Total Economic Loss for 2014 and 2030. Source: Present global GDP: World Bank. Projected 2030 GDP: Oxford Economic Forecasting. Economic losses from GAR 2015 and AIR Worldwide, 2015

Year	Global GDP	Total economic loss	Economic loss per global GDP
2014	75'621'900'000'000	250'000'000'000	3.30592E-05
2030	122'771'000'000'000	750'000'000'000	6.10896E-05

Figure 3: Rate of GDP growth as compared to the growth of economic losses and growth of economic exposure of Miami USA, Mumbai India and Guangzhou China, graph by Jerry Volzquez based on GAR data

A comparison of the present and projected global gross domestic Production (GDP) in 2030 can be seen in Table 2 above. Note that direct economic loss data varies for different countries and usually it is not openly available but if a country intends to monitor the progress of the SFDRR Target C, then the the country total GDP and total economic loss per GDP needs to be computed.

However, using total economic losses for this exercise, this would mean that to meet the Sendai Framework global target, either the “global GDP increase” should be doubled by 2030, effectively quadrupling the present GDP, or the projected increase in losses (USD 500 billion) is halved by 2030. Both of these requirements are very ambitious. The first condition is highly unlikely. The second condition may be possible, but extremely difficult.

One of the key drivers of the increasing economic losses is the increase in economic exposure of assets to hazards. Economic and urban growth, natural and artificial subsidence, sea level rise and climate change will likely contribute to increasing this exposure dramatically, particularly in low and middle-income countries. .

Global target C: Reduce direct disaster economic loss in relation to global gross domestic product (GDP) by 2030.

- C-1 (compound) Direct economic loss attributed to disasters in relation to global gross domestic product.
- C-2 Direct economic loss attributed to disasters.
- C-3 Agriculture is understood to include the crops, livestock, fisheries, aquaculture, apiculture and forest sectors as well as associated facilities and infrastructures. Direct economic loss to all other damaged or destroyed productive assets attributed to disasters.
- C-4 Productive assets would be disaggregated by economic sector including services, according to standard international classifications. Countries would report against these economic sectors relevant to their economies. This would be described in the associated metadata. Direct economic loss in the housing sector attributed to disasters.
- C-5 Data would be disaggregated according to damaged and destroyed dwellings. Direct economic loss resulting from damaged or destroyed critical infrastructure attributed to disasters.
- C-6 The decision regarding those elements of critical infrastructure to be included in the calculation will be left to the Member States and included in the accompanying metadata. Protective infrastructure and green infrastructure should be included where relevant. Direct economic loss to cultural heritage damaged or destroyed attributed to disasters.

Figure 2: Direct Economic Losses for 81 countries sample - USD of 2011. Source: Julio Sergio, UNISDR, 2015

C2: Direct agricultural loss attributed to disasters

This indicator is calculated based on five sub-indicators:

- C2(C): Impact to crops
- C2(L): Impact to livestock (and apiculture)
- C2(FO): Impact to forestry
- C2(AQ): Impact to aquaculture
- C2(FI): Impact to fisheries

Impact to Agriculture: $C2 = C2(C) + C2(L) + C2(FO) + C2(AQ) + C2(FI)$

Material impacts to Agriculture																			
C-2 Summary of material impacts to Agriculture by hazards types																			
Measurement units: see column at right

Training and Awareness

Extreme Winds Events

Extreme wind events in Sri Lanka are most likely to occur in the months of June and November. With respect to spatial distribution, wind events are most prevalent in the districts of Rathnapura, Badulla, Anuradhapura, and Colombo. People in Sri Lanka have not been very much affected by wind events. However, an exception to this is the years 1978 and 2000...

RECENT DISASTERS

May 2017, Flood

Heavy rains were received on 25 of May to the South-western watersheds in the country. Large amount of rains were received within 12 hours in SW regions including Namunuthanna (619mm) of, Bulathsinhela(419mm),Morawaka (400mm) and Walasmulla (437mm) leading riverine floods of the Kalu, Nilwala and Gin rivers. Around 717,622 People were affected in 15 Districts. 212 Deaths reported as per the situation report issued by DMC on 04-06-2017 1800hrs. Further, over 2,313 houses fully destroyed and around 12,529 houses partially damage.

March 2017, Drought

Nearly 951,597 people in several districts have been affected by the prevailing drought. 95,334 people in Eastern Province, 428,181 people in Northern Province, 133,198 people in North Western Province, 101,498 people in Sabaragamuwa Province, 7660 people in North Central Province, and 185,726 people in western province are facing a water shortage due to the drought in Sri Lanka.

Disaster Information Management System - Sri Lanka

Welcome to

The Disaster Management Centre (DMC) of the Ministry of Disaster Management with technical and financial support from the Disaster Risk Management (DRM) programme of the United Nations Development Programme (UNDP) and the UNDP Regional Centre in Bangkok (RCB) has initiated the development of a database on the past disaster incidents from 1974 to date. The Disaster Information Management System is a sustainable arrangement within an institution for the systematic collection, documentation and analysis of data about losses caused by natural and man made disasters

Institutes providing disaster Specific Spatial data in Sri Lanka

Disaster and Sector information	Department/Institutes Responsible
Droughts	International water management institute (IWMI)
Floods	Disaster management Centre (DMC), IWMI, CCMD
Landslides	National Building research organization(NBRO)
Tsunami information & early warning	Meteorological department
Aquatic resources and fisheries data	National aquatic resources and research department(NARA),Marine Environment Protection (MEPA)
Coastal Erosion	Department of coastal conservation (CCMD)
Economic losses	Department of census and statistics
Additional Spatial data and in-situ information	National Spatial Data Infrastructure (NSDI)

Evaluation Framework

LINKED OBJECTIVES	Success measure	Verification	Risks and assumptions
Goals: Develop a spatial data repository implementation of SFDRR in Sri Lanka	The spatial data repository will support the implementation of SFDRR	SFDRR monitor records using geospatial information	SFDRR does not change or get modified
Purpose: monitor the progress in DRR	Promoting the use of space info	Increase in geo data use for SFDRR	Spatial data will continue to be available
Outcomes: Spatially monitored SFDRR indicators (B, C, D)	/	/	Cooperation of the stakeholders concerning the use of geospatial
Inputs: Spatial data mining ...	/	/	/

Challenges of the Use of Geospatial information for the SFDRR monitoring

- Discontinuity of geospatial data by data providers.
- Unavailability of resources for the awareness raising among disaster managers.
- Difficulties due to trans-boundary cooperation of regional partners in the use of geospatial data for disaster emergency response (SAARC).
- Finding suitable methodologies for the accurate SFDRR monitoring
